- Notes
 1) Use the Risk Review process as per the following guidelines
- 1a) Use ABB Ber-Mac risk review process for Lump Sum proposals with a value greater than \$500KCAD
- 1b) Use the ABB Canada Process Automation Divison risk review process for proposals with a value greater than \$2MCAD and less than \$5MCA

1c) Use the ABB Group risk review process using the Risk Review database for all proposals with a value greater than \$5MCAD

Subject:

Quote # 1780-RFQ-024

Project Name:

MCC/Instrument Air Building BU-1100 Construction

Dear Brant:

ABB Ber-Mac is pleased to submit our proposal for MCC Construction, in the Lump Sum amount of <u>TWO HUNDRED</u>, <u>EIGHTY-NINE THOUSAND CANADIAN DOLLARS (CAD 289,000.00)</u> excluding taxes, with regards to the scope of work as indicated below, for <u>one</u> building.

DU

INCLUDED IN OUR PROPOSAL:

Table 1 Self Framing Building

Item	Qty	Description
1.	1	14'-10" wide x 48'-2" long x 12'-6" eave (4.53M x 14.683M x 3.81M), gable style with 4:12 slope
2.	Lot	22 gauge galvalume exterior walls and roof
3.	Lot	R12 batt insulation in walls, R20 batt in roof with 6 mil vapor barrier throughout
4.	Lot	20 ga white perforated aluminum interior liner (10% free area) above 3' with 24 gauge white fluted aluminum below 3'
5.	Lot	Caulked interior joints
6.	Lot	Climaseal fasteners
7.	1	Inactive ridge (non-ventilating)
8.	2	6' x 7' steel man doors (20 ga doors, 18 ga frames, R12 insulated) with locking panic hardware and hydraulic door closures on active leafs, barrel bolts on inactive leafs, 24" x 24" IWG windows on both leafs, check chains, weather stripping, and aluminum thresholds
9.	2	double door bolt-on transoms
10.	1	full height and width partition wall with 10% perforated white aluminum interior liner on one side and 3" Roxul insulation
11.	Lot	Misc. wall cutouts as required
12.	Lot	Ice rakes at lower eaves
13.	Lot	Continuous eaves trough with 2 – downspouts
14.	Lot	Designed to accommodate a wind load of 150 km/hr and snow load of 2.2 kPa
15.	Note	Engineer stamped building drawings (AB registered)
16.	Lot	Building to be installed on the following steel skid in Vendors Calgary yard

0/2

Table 2 Skid Base, Upper Steel and Platforms

Item	Qty	Description
1.	1	14'-10" wide x 48'-2" long skid base
2.	Lot	Material and fabrication
3.	Lot	Structural steel to conform to CSA-G40.21, Grade 300W/350W
4.	Lot	Welding to conform to CSA W59 and CSA W47.1
5.	Lot	Metal cored arc welding (MCAW)
6.	Lot	W18x50 perimeter and main beams w/ W16x36 intermediate members
7.	Lot	C4x5.4 cross members on 24" centers
8.	Lot	HSS 3"x3"x1/4" posts welded inside of the walls and attached to W6x15 cross members at top for 2 level cable tray supports (x3 frames)
9.	8	Eight (8) removable lifting lugs
10.	Lot	Non-destructive testing (NDT): - 100% MPI on lifting lugs - 10% MPI on fillet welds - All other NDT is extra, if required
11.	Lot	1/4" flat plate decking w/anti-slip paint
12.	Lot	Floor plate fully seal welded at all seams and stitch welded around the perimeter and u/s to floor members
13.	Lot	Painting, excluding u/s of floor plate as follows: Surface preparation as per SSPC-SP-6, commercial blast cleaning prime with 1 coat of Cloverdale 710 series primer (1.5 - 2.0 mils DFT) topcoat with 1 coat of Cloverdale 74 series industrial enamel (1.25 - 1.75 mils DFT) Underside of building floor plate is bare metal (unpainted) Finish color (TBC)
14.	Lot	3"- R20 spray foam polyurethane insulation c/w Towerthon II fire retardant coating u/s of the building floor
15.	****	Standard QC package
16.		Engineer stamped building drawings (AB registered)

Table 3 HVAC

Based on non-classified area 5 kW of heat gains ASSUMED (to be confirmed) Based on 3 ACPH continuous

Item	Qty	Description
1.	1	MCC/IA Building: (4530x14683x3800) Based on 5 kW of heat gain 1 – Bard Packaged Wall mount units W42A1-C15EPXXXJ c/w 3.5 ton cooling and 15 kW of heat 480/3/60 Supply/Return Grilles J control module Economizer TEC 40 Temperature controller Tec 40 to control Bard Unit and unit heater c/w fire shutdown contact, common trouble alarm from unit Note: Fan to run continuously, balanced to 3 ACPH 8 week delivery
2.	1	1 – 15 kW OAS Electric unit heater 480/3/60 c/w wall bracket and built in thermostat (installation by others)
3.	1	Compressor Room: $1 - \text{ET12-1 GP}$ exhaust fan $120/1/60~1140~\text{rpm}$ motor TEFC c/w shutter, back guard and hood $1 - 12'' \times $
4.	1	HVAC platform supported by the building on the north side of the building.
5.	Note	Price includes Eng/Drwgs/Startup/Balancing – on site in Vendors yard in Calgary
6.	Note	Not included in HVAC: Sliders if required Design and supply of stand/platform/access platform for HVAC units Humidity control BAS building automation system Gas or fire detection systems Fire extinguishers Alberta building code schedules Site Work

Table 4 Supply, Installation and Connection of the following:

Item	Qty	Description						
1.	Lot	Cables as per cable schedule.						
2.	1	CPNL-100 Contactor Panel						
3.	1	TNS-100 45 KVA 480-120/208 3 Phase Dry Type Transformer						
4.	1	DP-100 Distribution Panel						
5.	12	ndustrial 2 lamp 4' fluorescent light fixtures c/w Gards.						
6.	2	1-pole switch's for interior lights.						
7.	3	70W HPS wall mount outdoor light (Hubbell PVL-070S-521 or equivalent)						
8.	4	Wall Pack 313-175MAL-T 175w MH (In Compressor Room)						
9.	2	EXIT SIGN Install						
10.	1	Tork1 photo cell						
11.	2	Receptacle 15A/120V						
12.	1	Exterior GFCI Receptacle Install						
13.	2	Emergency Stop ESD stations. (Cooper GHG series)						
14.	2	Crusader weather shrouds for ESD stations.						
15.	2	MMS for exhaust fans						
16.	3	Smoke Detectors (2 - MCC room, 1 – Compressor Room)						
17.	1	Red Strobe						
18.	1	Blue Strobe						
19.	1	Amber Strobe						
20.	Lot	Grounding of Equipment						
21.	Lot	Cable Tray as per drawings						
22.	4	1/4" X 2" X 24" isolated ground bars						
23.	2	Thermostats for H-VAC Control						
24.	1	Power connections Unit Heater						
25.	1	Power connection of Exhaust fan c/w MMS Install						
26.	1	Power connection o Bard Packaged Wall mount units W42A1-C15EPXXXJ f						
27.	Lot	Visual inspection and cleaning of the Owner supplied equipment						
28.	Lot	Preparation of the Building Electrical for transportation						

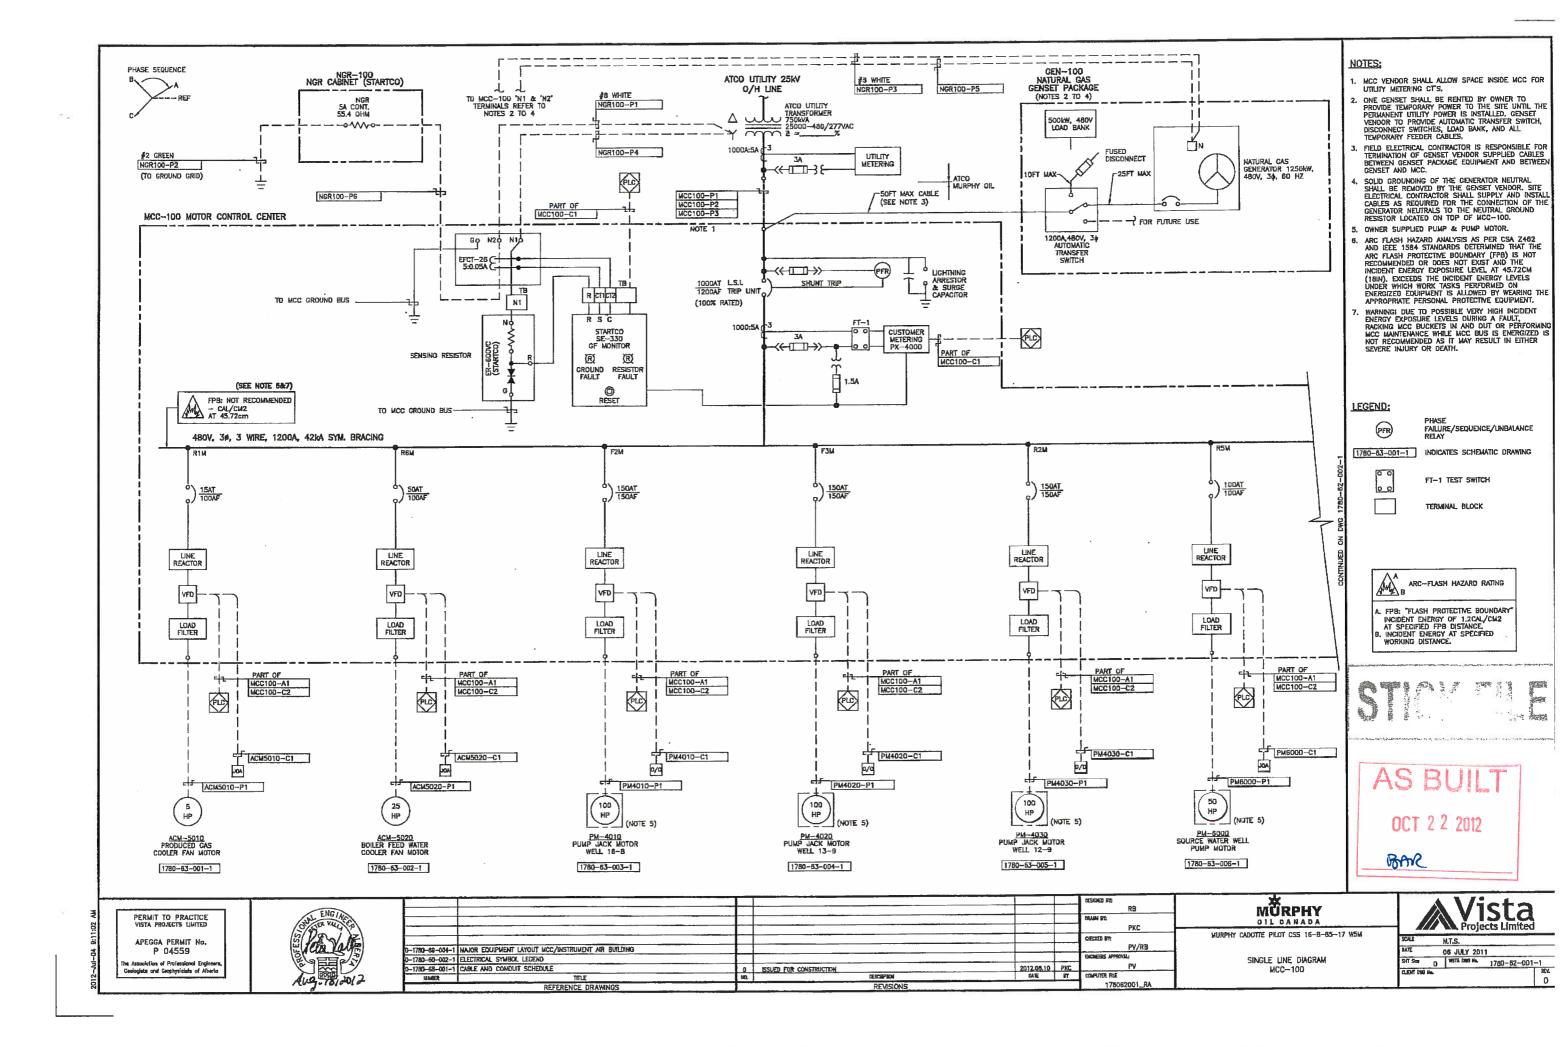

Dh

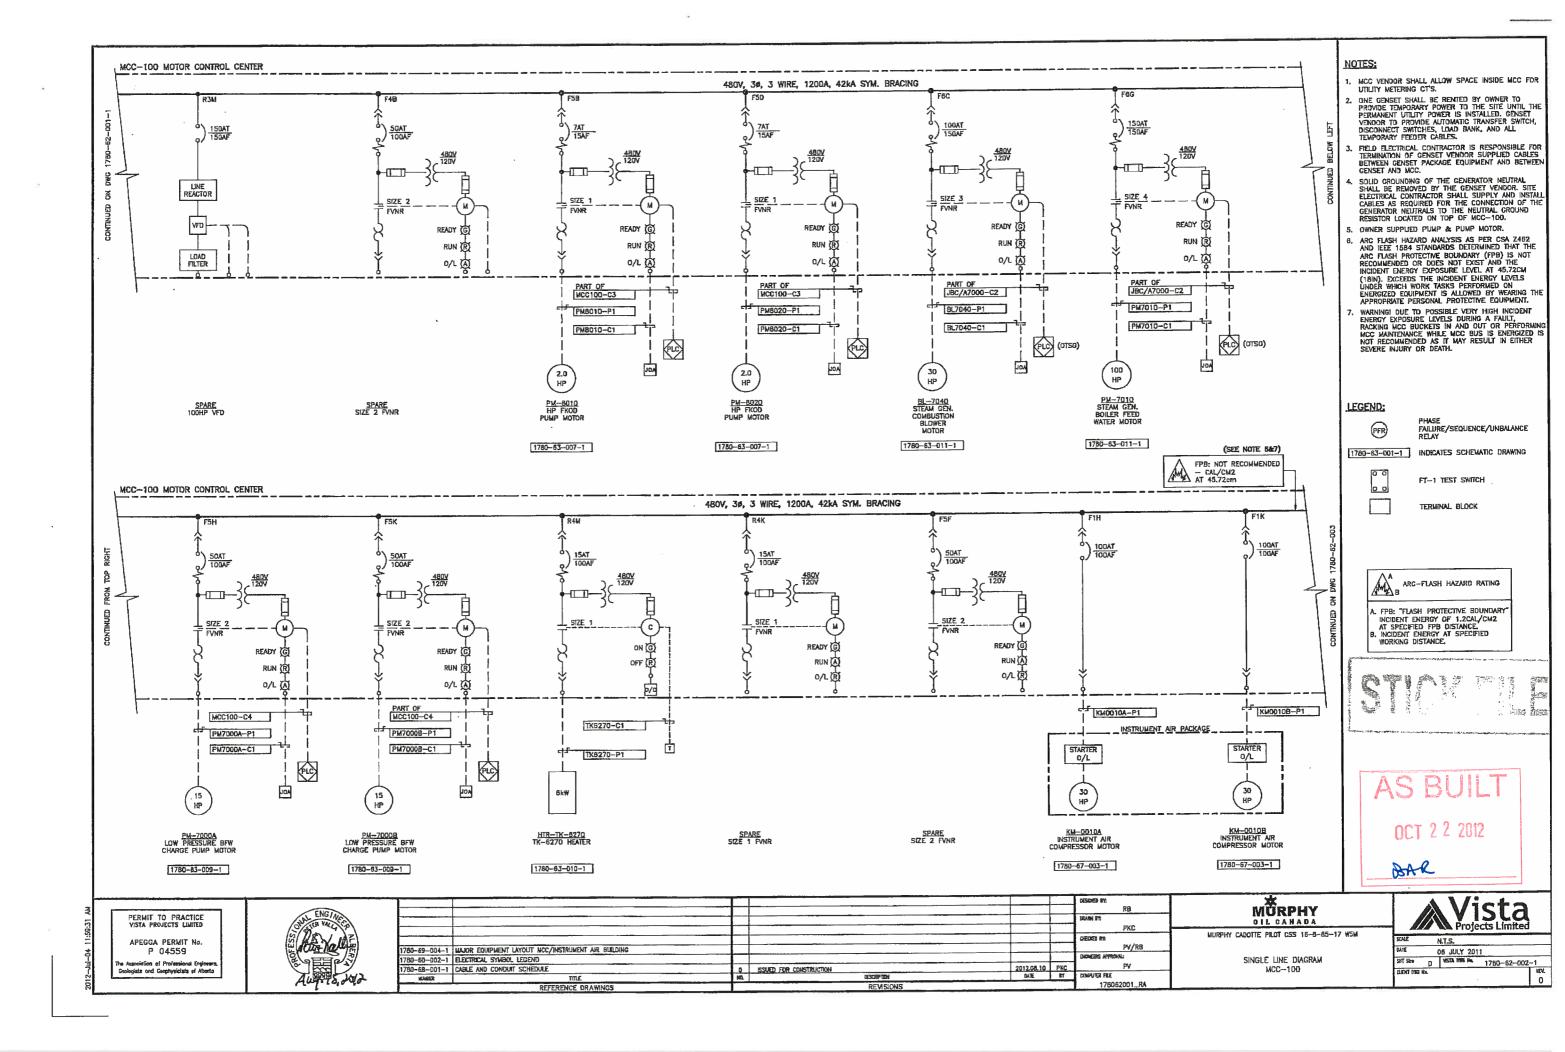

Table 5 Installation and Connection of Owner Supplied Equipment

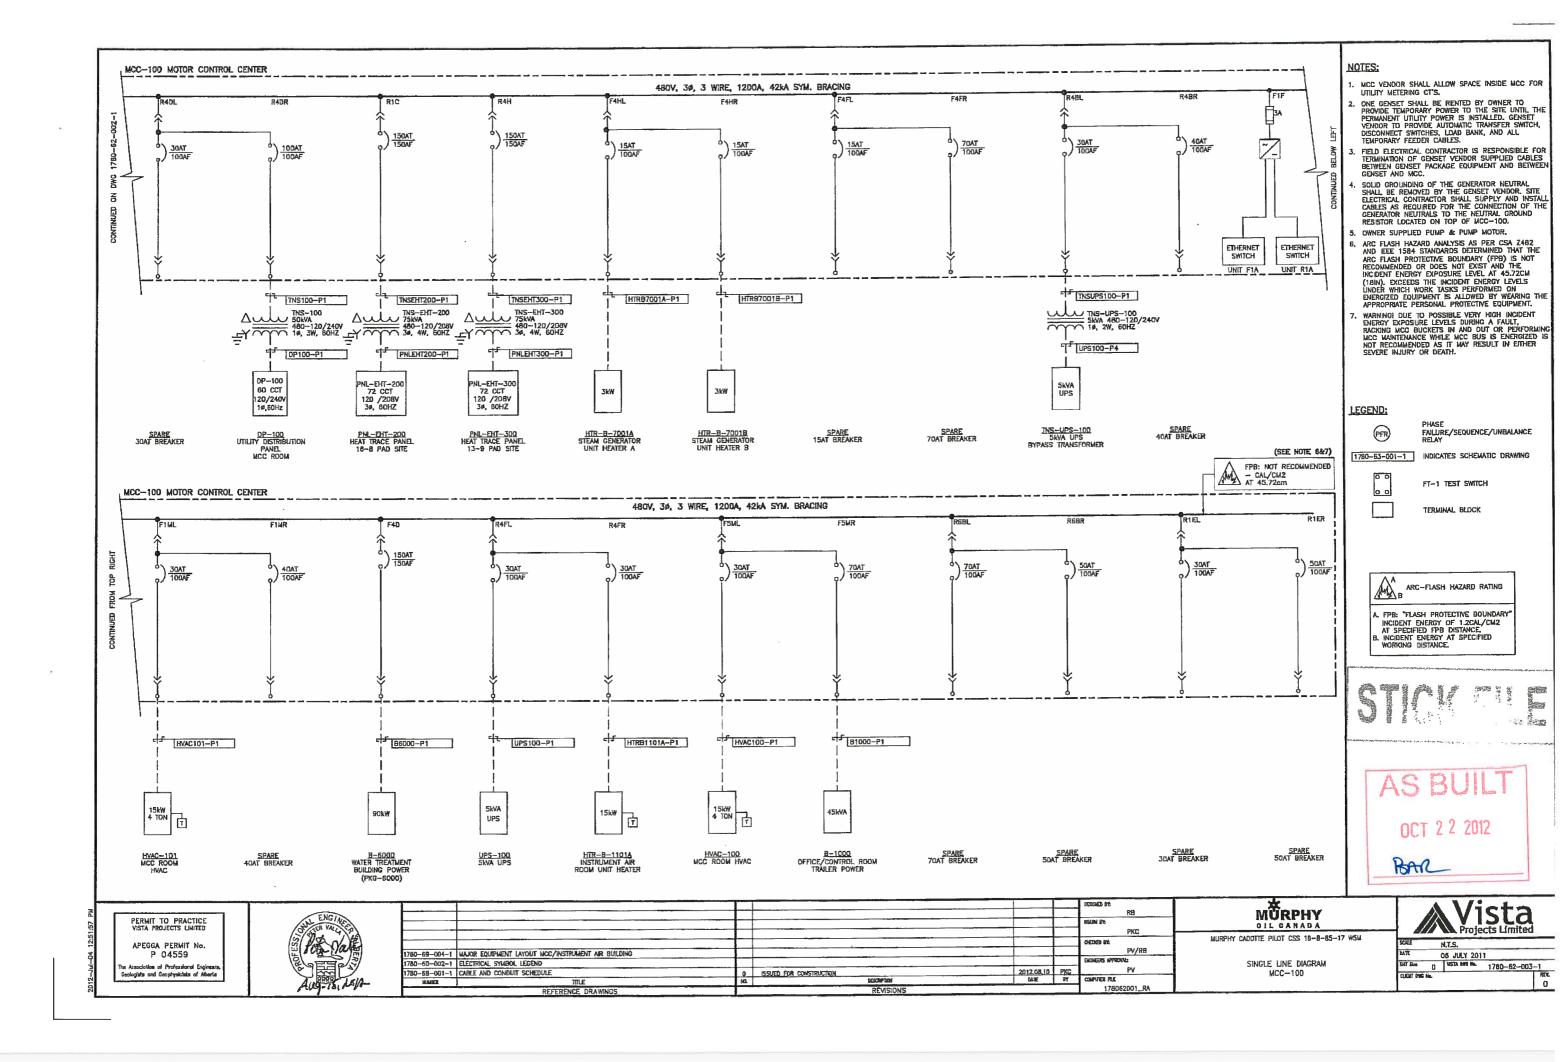

Item	Qty	Description
1.	1	Set Owner supplied PNL-PLC-100
2.	1	Set Owner supplied TNS-UPS-100
3.	1	Set Owner supplied DP-UPS-100
4.	1	Set Owner supplied BATT-100
5.	1	Set Owner supplied MCC-100
6.	1	Set Owner supplied PNL-101 (Well Monitoring Panel)
7.	1	Set Owner supplied PNL-102 (PROMORE Panel)
8.	1	Set Owner Supplied NGR-100

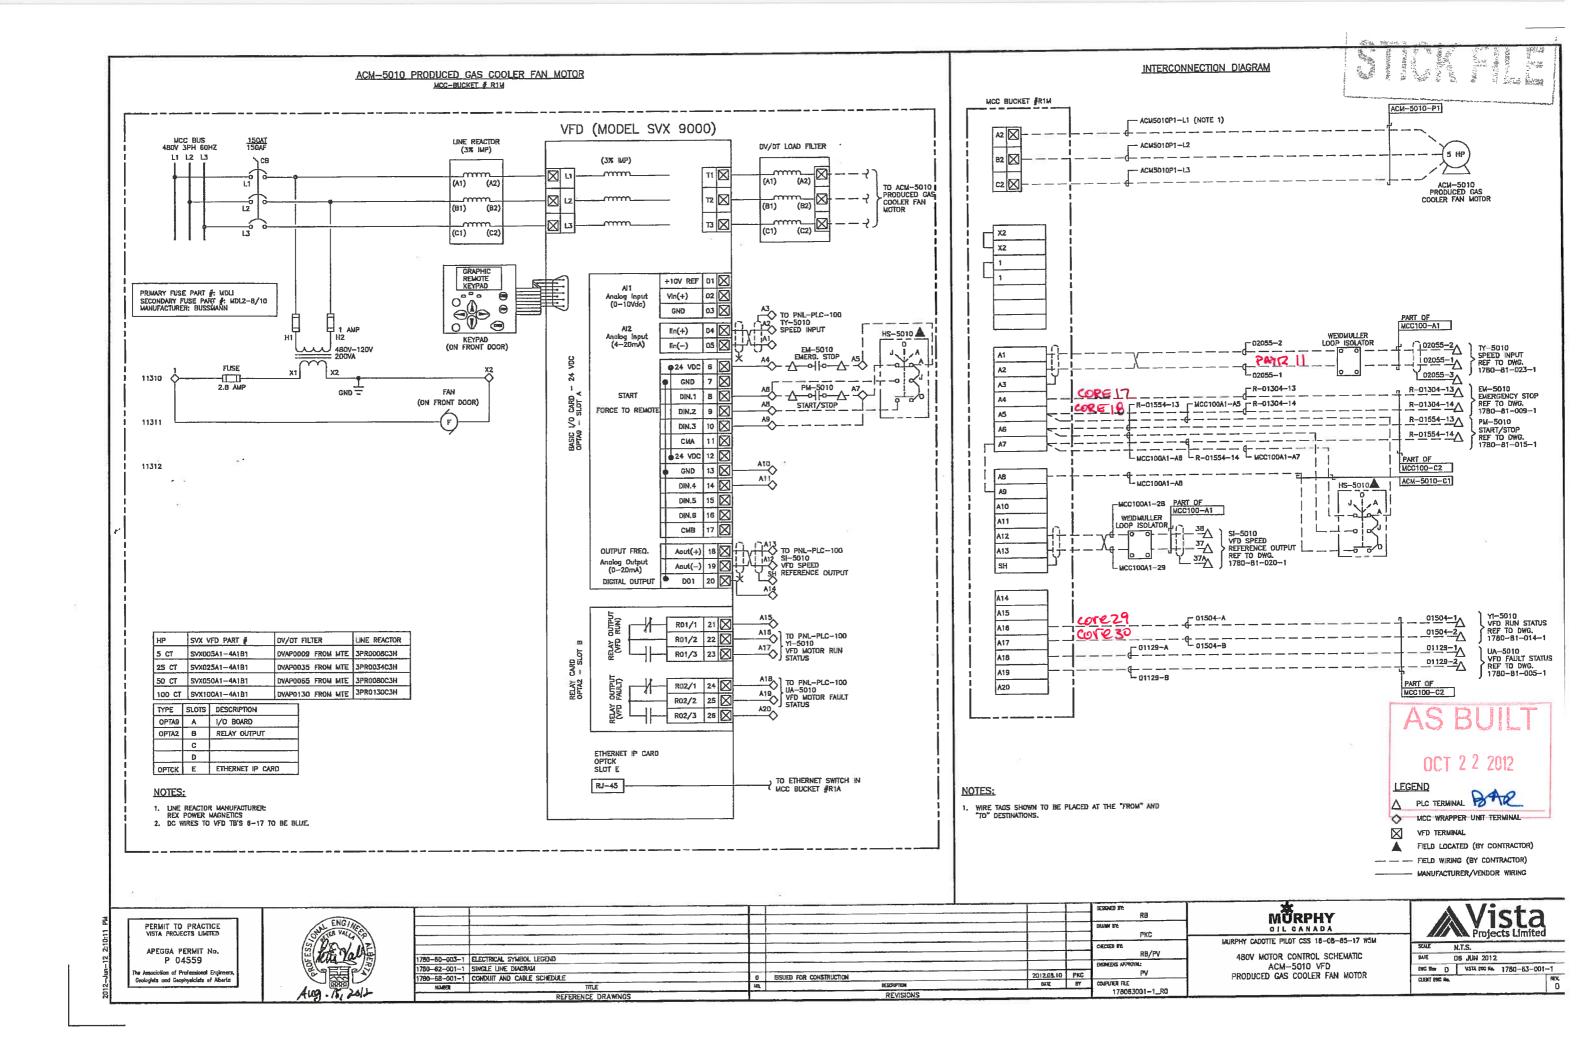

Table 6 Clarifications & Exceptions

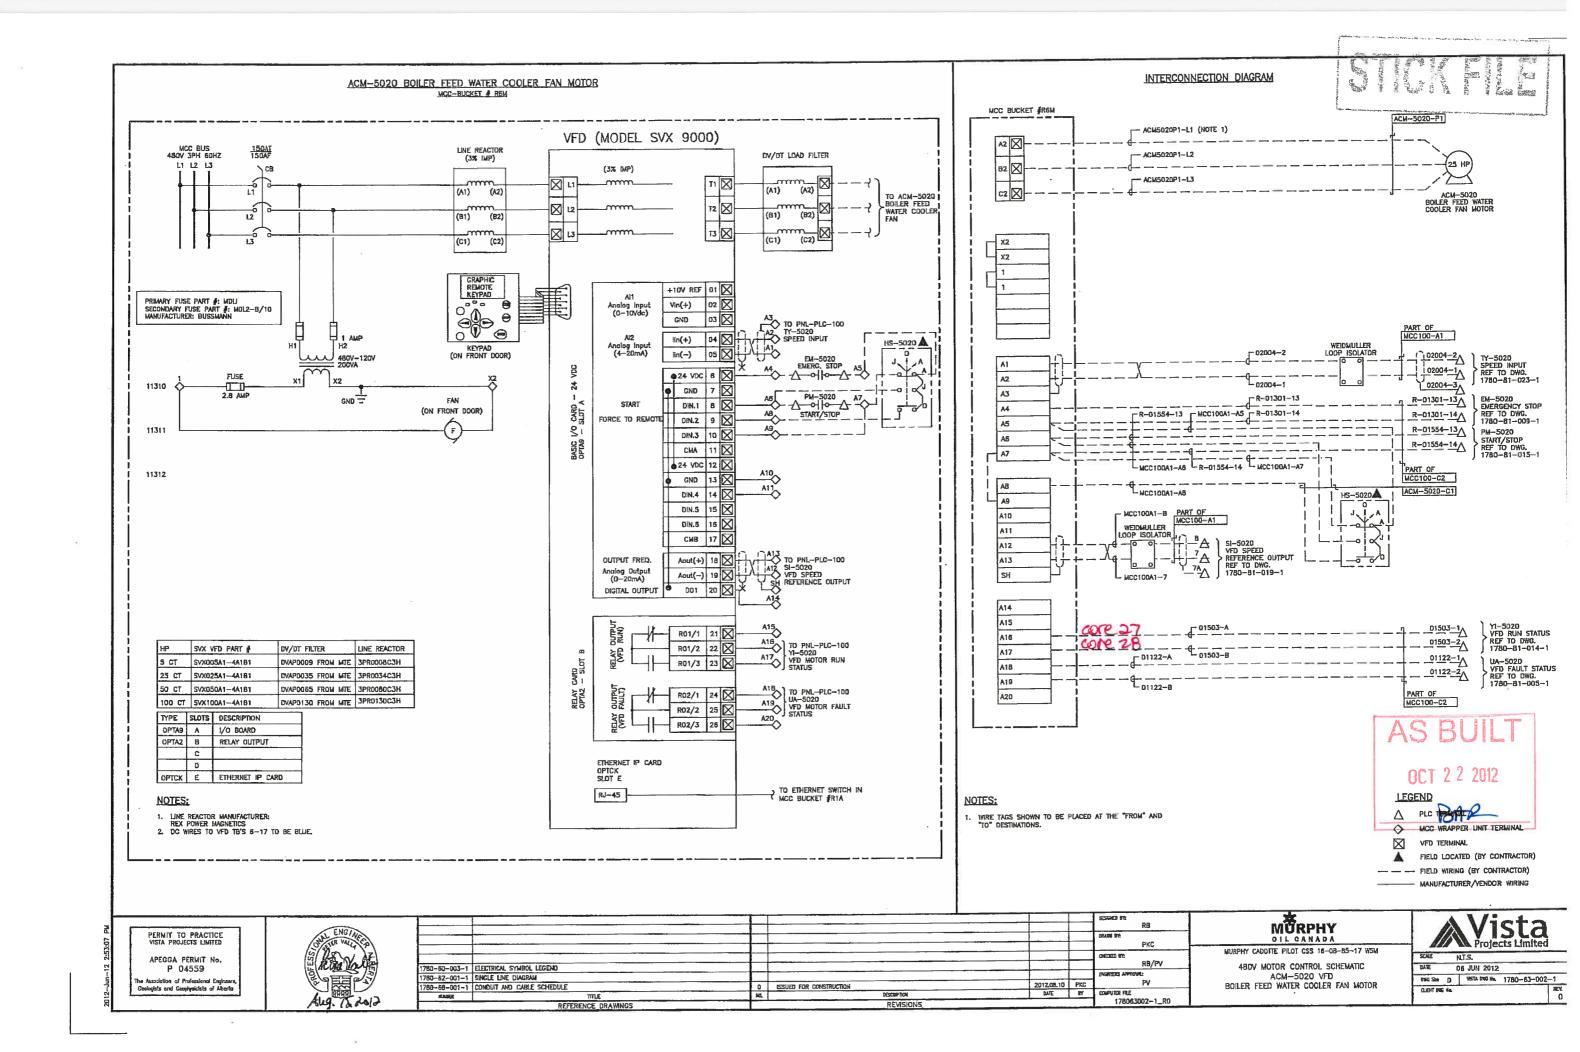

Item	Clarifications & Exceptions Description
1.	Quotation to be reviewed upon receipt of IFC drawings.
2.	We have quoted our standard gable and shed style self-framing buildings with typical materials, finishes and hardware
3.	Building wiring quoted as general purpose.
4.	E.M.T. conduit to be used inside the building. Rigid aluminum conduit will be used outside.
5.	We have not included on/off switches for IA Compressors as most of these units are furnished with control stations and starters as part of the package.
6.	Electrical permit has been included in quotation.
7.	One set of red line as-built drawings has been included in the quotation.
8.	QA/QC as per ABB Ber-Mac standards has been included in the quotation.
9.	Continuity testing and meggar testing has been included in the quotation.
10.	Loading of completed building package onto Owner supplied transport has been included in quotation.
11.	Work to be carried out in Calgary, Alberta.
12.	If the building Vendor's standard colors cannot be used, additional charges will apply for powder coating.
13.	Building Permits by others.
14.	The building and doors are not fire rated.
15.	Building accessories (unless otherwise noted) are not included.
16.	Building security swipe card system not included.
17.	Door platforms & stairs not included.
18.	Work schedule based on 10 hours per day 5 days per week. Weekends and Statutory holidays not included.
19.	We have included temporary heat and power for construction with quotation.
20.	We have included 480vac temporary power for testing.
21.	Fire suppression system has not been included in the quotation.
22.	Transportation of building to site has not been included in the quotation.
23.	Load calculations and all transportation insurances are by others.
24.	All Mechanical and Instrumentation on Instrument Air compressor unit.
25.	Site work has not been included in the quotation.
26.	Electrical Engineer stamped drawings have been included in the quotation.
27.	All commissioning assistance will be at force account rates.
28.	All information provided within this quote is confidential.
29.	Quotation validity 30 days
30.	Payment terms net 45 days.
31.	Please see attached ABB Inc exceptions to Terms and Conditions

NOTES

- 1. ALL DIMENSIONS ARE IN MILLIMETERS UNLESS SHOWN OTHERWISE.
- TERMINAL STRIPS TO BE RAISED UP OFF THE BACK PAN BY STEEL SECTION TO ALLOW FOR EASE OF ACCESS TO TERMINALS.
- 3. DOOR TO BE PROVIDED WITH ALL AROUND NEOPRENE GASKET.
- 4. CONTACTOR PANEL TO BE PROVIDED WITH A POCKET TO STORE ASSOCIATED DARAWINGS AND/OR HANDBOOKS INSIDE THE PANEL.
- 5. ALL WIRING FROM CONTACTOR TERMINALS TO BE MIN. #12 AWG COPPER.

 -HOT WIRING SHALL BE BLACK.

 -SWITCHED WIRING SHALL BE BROWN.

 -NEUTRAL WIRING SHALL BE WHITE.

Clarification

"All rights, title and interests, including copyright ownership, to all information and materials that may be provided by ABB Inc. ("ABB") shall remain the property of ABB.

Terms:

Our price is based on progress invoicing due "Net 30 days", and is calculated on percent complete of project. We have based our pricing with anticipation of work being performed in the second quarter of 2012. Due to fluctuation of copper our cable and wire pricing is to be revised at time of order based on most current market pricing.

Sincerely, ABB BER-MAC

CertainTeed Corporation P.O. Box 860 Valley Forge, PA, USA 19482-0105 Phone: 800-233-8990

610-341-7000 Fax: 610-341-7994

Fax-On-Demand: 800-947-0057 Website: www.certainteed.com

3. PRODUCT DESCRIPTION

Basic Use: Fibre glass building insulation is intended for use in either residential or commercial construction as thermal and acoustical insulation in ceilings, walls and floors.

The product is unfaced and designed for use in standard wood stud and steel frame assemblies.

Benefits: Installing fibre glass building insulation is an easy, cost effective method to help conserve energy in residential and commercial new construction, remodeling, and

reinsulation projects. In addition to its thermal properties, fibre glass building insulation also provides excellent acoustical performance. It is compression packaged for ease of handling, and its broad availability of R-values and sizes ensures the right product for the job.

Composition and Materials: The product is composed of yellow, uniformly textured, inorganic glass fibres.

Sizes: Available standard sizes are listed in the table below. Contact CertainTeed for non-standard sizes.

Limitations: Insulation shall not be installed over or within 75 mm (3 in.) of recessed light fixtures, unless the fixture is identified for contact with insulation, Type IC.

Because of potential skin irritation, unfaced building insulation should not be used in an exposed installation.

All building insulation should be kept dry. Wet fibre glass insulation will lose its effectiveness until it dries. Fibre glass will often dry naturally and regain its original R-value.

UNFACED

However, under conditions where the insulation will not dry thoroughly it should be removed and allowed to dry or be replaced.

4. TECHNICAL DATA

Applicable Standards:

National Building Code 1995
 Article 9.25.2.2
 CAN/ULC-S702-1997
 CCMC Evaluation Listing
 No. 13020-L
 CSA A101-M1993
 CAN/CGSB-51.11-92

Fire Resistance:

CAN/ULC-S102-1998
 Flame Spread: 5
 Smoke Developed: 0
 CAN4-S114-1980
 Noncombustibility-Pass
 ULC-S129-1995
 Smolder Resistance-Pass

Quality Assurance: Many of CertainTeed's manufacturing plants are registered to ISO 9001-2000 standards.

40	7.0	11 1/4	286	16, 24	406, 610	48	1219							

5. INSTALLATION

The standard practice for installing fibre glass batts in wood studs is to friction fit batts into stud cavities. When batts completely fill stud cavities, they are constrained by studs at their edges and by wall facings front and rear.

- When fibre glass batts are installed in ceiling or floor joists, they must be supported by a ceiling finish material or another material such as wire.
- Where vapour control is required, the vapour retarder shall be installed per the 1995 National Building Code, Section 9.25.

6. AVAILABILITY AND COST

For availability and cost, contact your local distributor, or call CertainTeed Sales Support Group at 800-233-8990.

7. WARRANTY

Refer to CertainTeed's Lifetime Limited Insulation Warranty for Fibre Glass Building Insulation (30-21-1321).

8. MAINTENANCE

No maintenance required.

9. TECHNICAL SERVICES

Technical assistance can be obtained by calling CertainTeed at 800-233-8990.

### HVAC-01/02 WALL MOUNTED HVAC UNIT

BARD MODEL W48A1-C15EPXXXJ 732L/s @ 20Pa ESP 10% 73L/s MIN O/A 0.37kW INDOOR BLOWER MOTOR 0.25kW OUTDOOR FAN MOTOR 460/3/60, MCA=27A NOMINAL 4TON COOLING CAPACITY AT 35°C AMBIENT 13.8kW TOTAL, 10.8kW SENSIBLE R410A REFRIGERANT 15kW ELECTRIC HEATING COIL EACH UNIT IS SELF CONTAINED AND OPERATED BY THE ROOM MOUNTED TEC-40 CONTROLLER. c/w SUPPLY/RETURN GRILLES, FIRE SHUTDOWN CONTACT AND COMMON TROUBLE ALARM.

### HVAC - SEQUENCE OF OPERATION

### 1.0 HVAC SYSTEM - DESIGN OVERVIEW

- 1.1 ROOM CONSISTS OF TWO HVAC UNITS AND ONE TEMP CONTROLLER. 1.2 THE TEMP CONTROLLER, OPERATES THE HVAC UNITS IN A STAGED ARRANGEMENT
- BASED ON THE SPACE TEMP. 1.3 DESIGN INDOOR TEMP/PRESSURE LIMITS: MAX TEMP: 23°C
  - MIN TEMP: 20°C
  - BLDG PRESSURE: POSITIVE (UNMONITORED)
- 1.4 RUN TIME SCHEDULES, INITIAL SETPOINTS ETC. SHALL BE EVALUATED DURING COMMISSIONING AND ADJUSTED TO MEET THE FINAL DESIGN REQUIREMENTS/INTENT.

### 2.0 HVAC SYSTEM - VENTILATION

2.1 VENTILATION OCCURS ONLY WHEN UNIT(s) ARE RUNNING. EACH UNIT PROVIDES 1.5ACH

### 3.0 HVAC SYSTEM - 'FREE COOLING' OPERATION

- 3.1 HVAC UNITS ARE EACH EQUIPPED WITH AN ECONOMIZER TO PROVIDE FREE COOLING WHEN THE CONDITIONS ARE RIGHT. THIS IS CONTROLLED WITHIN EACH UNIT BASED ON THE OUTDOOR AIR ENTHALPY AND THE INDOOR SPACE TEMP.
- 3.2 ONCE THE HVAC UNITS CAN NO LONGER HOLD THE COOLING SET POINT BY FREE COOLING THEY WILL AUTOMATICALLY SWITCH OVER TO MECHANICAL COOLING. SEE 4.0.

### 4.0 HVAC SYSTEM - 'MECHANICAL COOLING'

- 4.1 WHEN THE HVAC UNITS CAN NO LONGER HOLD THE COOLING SET POINT WITH FREE COOLING PER 3.0, MECHANICAL COOLING IS INITIATED. THIS IS CONTROLLED BY THE J MODULE OF THE HVAC UNITS.
- 4.2 WHEN MECHANICAL COOLING IS ENERGIZED THE ECONOMIZER DAMPER RETURNS TO ITS MIN O/A POSITION AND THE DX COOLING SYSTEM IS STARTED.
- 4.3 IF THE COOLING SET POINT IS NOT MET WITHIN 10 MINUTES, THE CONTROLLER CALLS FOR THE DX COOLING FROM THE SECONDARY UNIT.
- 4.4 ONCE COOLING SET POINT IS MET, THE DX COOLING FROM EACH UNIT IS CYCLED OFF.
- 4.5 WHILE THE DX COOLING IS OFF AND THE O/A TEMP IS >10°C, THE ECONOMIZER DAMPER WILL BE IN ITS MIN O/A POSITION TO CONTINUE TO VENTILATE THE BUILDING. IF THE BUILDING TEMP RISES ABOVE SET POINT THE MECHANICAL COOLING CYCLE
- BEGINS AGAIN FROM 4.3. 4.6 MECHANICAL COOLING IS LOCKED OUT WHEN THE O/A TEMP IS ≤10°C.

### 5.0 HVAC SYSTEM - 'HEATING' OPERATION

- 5.1 EACH HVAC UNIT IS EQUIPPED WITH AN ELECTRIC HEATER SIZED TO COVER THE VENTILATION AND THE ROOM LOSSES TO MAINTAIN THE ROOM AT ITS MINIMUM TEMPERATURE OF 20°C.
- 5.2 THE UNIT'S HEATERS ARE CONTROLLED INTERNALLY BY THEIR CONTROLLER.
- 5.3 WHEN THE ROOM TEMP DROPS BELOW THE HEATING SET POINT, THE LEAD UNIT ENERGIZES THE HEATING. THE ECONOMIZER DAMPERS WILL ALREADY BE IN THEIR MINIMUM O/A POSITION AS THEY COME OFF THEIR 'FREE COOLING' CYCLE DESCRIBED IN 3.0.
- 5.4 IF THE HEATING SET POINT IS NOT MET WITHIN 5 MINUTES, HEATING FROM THE SECOND UNIT IS ENERGIZED.

BEGINS AGAIN FROM 5.3.

5.5 ONCE HEATING SET POINT IS MET, THE HEATERS IN EACH UNIT ARE CYCLED OFF. 5.6 IF THE ROOM TEMP FALLS BELOW THE HEATING SET POINT THE HEATING CYCLE

### 6.0 HVAC SYSTEM - EMERGENCY SHUTDOWN

- 6.1 ON A REMOTE EMERGENCY SHUT DOWN
- SIGNAL FROM OTHERS STOPS HVAC UNITS. UNITS ARE PERMITTED TO OPERATE ONCE SHUTDOWN CONTACT IS CLOSED AGAIN.

I/A Room (BU-1100)

Heating & Ventilation System Design

System Description:

The heating & ventilation system in this room consists of the following equipment. One 236L/s wall mounted exhaust fan. One 610x610 intake damper c/w filter. One 15kW electric unit heater c/w built-in thermostat. All equipment shall be rated for use in a general purpose area with 480/3/60 and 120/1/60 power supplied.

Summer (cooling):

As the room temp rises above the cooling set point, the exhaust fan starts and operates until set point is met. The room cooling set point is initially set at 74F (23C).

Winter (heating):

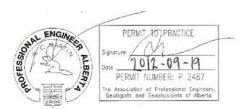

As the room temp falls below the heating set point, the unit heater starts and operates until the heating set point is met. The room heating set point is initially set at 55F (13C).

#### Notes:

- 1. HVAC system is designed based on the project specs which were available at the time of design.
- 2. The calc assumes lighting load to be in addition to the given heat gains and is based on one watt per square foot of floor space.
- 3. Building infiltration is estimated based on one air change for the cooling load and two air changes for the heating load.
- 4. Building envelope assumed to be constructed to an "average" tightness as defined by ASHRAE.
- 5. Heating requirements are based on building losses with no internal equipment heat gains present.
- 6. Room volume is measured from the building drawings provided and represents the volume when the room is empty.
- 7. Partition wall assumed to be uninsulated.
- 8. Refer to HVAC Flow Diagram for full sequence of operation of the HVAC system.

Cyclic Steam Stimulation (CSS) Pilot

MCC Rm (BU-1100) HVAC System Design

System Description:

The HVAC system in this room consists of the following equipment. Two 4ton, 732L/s wall mounted HVAC units c/w 15kW electric heat. One thermostat controller. All equipment shall be rated for use in a general purpose area with 460/3/60 power supplied.

Summer (cooling):

As the room temp rises above the cooling set point, the unit controller starts the lead unit's cooling system. If set point is not met within a set time the controller will start the lag unit until the set point is met. The room cooling set point is initially set at 74F (23C).

Winter (heating):

As the room temp falls below the heating set point, the unit controller starts the lead unit's heating system. If set point is not met within a set time the controller will start the lag unit until the set point is met. The room heating set point is initially set at 68F (20C).

#### Notes

- 1. HVAC system is designed based on the project specs which were available at the time of design.
- 2. The calc assumes lighting load to be in addition to the given heat gains and is based on one watt per square foot of floor space.
- 3. Building infiltration is estimated based on one air change for the cooling load and two air changes for the heating load.
- 4. Building envelope assumed to be constructed to an "average" tightness as defined by ASHRAE.
- 5. Heating requirements are based on building losses with no internal equipment heat gains present.
- 6. Room volume is measured from the building drawings provided and represents the volume when the room is empty.
- 7. Partition wall assumed to be uninsulated.
- 8. Refer to HVAC Flow Diagram for full sequence of operation of the HVAC system.

2 - W48A1-C15EPXXXJ 4 Ton Bard Unit c/w 15kW of Heat 480/3/60

### THE WALL-MOUNT™ AIR CONDITIONERS - 9.0 EER, (60HZ)

### Models W18A to W60A 1.5 to 5 Ton (16,400 to 55,000 Btuh) Right Side Control Panel 60Hz

## GREEN REFRIGERANT R-410A

The Bard Wall-Mount Air Conditioner is a self contained energy efficient system, which is designed to offer maximum indoor comfort at a minimal cost without using valuable indoor floor space or outside ground space. This unit is the ideal product for versatile applications such as: new construction, modular offices, school modernization, telecommunication structures, portable structures or correctional facilities. Factory or field installed accessories are available to meet specific job requirements.

### Engineered Features

### Aluminum Finned Copper Coils:

Grooved tubing and enhanced louvered fin for maximum heat transfer and energy efficiency.

#### Twin Blowers:

Move air quietly. Most models feature multispeed blower motors providing airflow adjustment for high and low static operation. Motor overload protection is standard on all models.

#### Air Conditioner Compressor:

Scroll Compressors eliminate need for crankcase heater. Standard on  $1\frac{1}{2}$  to 5 ton.

### R-410A Refrigerant:

Designed with R-410A (HFC) nonozone depleting refrigerant in compliance with the Montreal protocol and 2010 EPA requirements.

### **Phase Rotation Monitor:**

Standard on all 3 phase scroll compressors. Protects against reverse rotation if power supply is not properly connected.

### Galvanized 20 Gauge Zinc Coated Steel Cabinet:

Cleaned, rinsed, sealed and dried before the polyurethane primer is applied. The cabinet is handsomely finished with a baked on textured enamel, which allows it to withstand 1000 hours of salt spray tests per ASTM B117-03.

### Foil Faced Insulation: Standard on all units.

Full Length Mounting Brackets: Built into cabinet for improved appearance and easy installation. NOTE: Bottom mounting bracket included to assist in installation.

#### **Electrical Components:**

Are easily accessible for routine inspection and maintenance through a right side, service panel opening. Features a lockable, hinged access cover to the circuit breaker or toggle disconnect switch.

#### **Electric Heat Strips:**

Features an automatic limit and thermal cut-off safety control. Heater packages can be factory or field installed for all 1½ through 5 ton models.

#### Filter Service Door:

Separate service door provides easy access for filter change.

#### One Inch, Disposable Air Filters:

Are standard equipment. Optional one inch washable filters available and filter racks permit the addition of 2" pleated filter. Factory or field installed.

### Condenser Fan and Motor Shroud Assembly:

Slides out for easy access.

#### **Barometric Fresh Air Damper:**

Standard on all units. Allows up to 25% outside fresh air. Optional ventilation packages available.

#### **Built-in Circuit Breakers:**

Standard on all electric heat versions of single (230/208 volt) and three phase (230/208 volt) equipment. Toggle disconnects are standard on all electric heat versions of three phase (460 volt) equipment.

#### Slope Top:

Standard feature for water run-off.

### Top Rain Flashing:

Standard feature on all models.

MEA # 357-93-E

#### Liquid Line Filter Drier:

Standard on all units. Protects system against moisture.

#### **Compressor Control Module:**

Standard on all units. Built-in off-delay timer adjustable from 30 seconds to 5 minutes. 2-minute on-delay if power interrupt. 120-second bypass for low pressure control, and both soft and manual lockouts for high and low pressure controls. Alarm output for alarm relay.

### High & Low Pressure Switches are Auto-Reset:

Standard on all units. Built-in lockout circuit resets from the room thermostat. Provides commercial quality protection to the compressor.

Certified to ANSI/ARI Standard 390-2003 for SPVU (Single Package Vertical Units).

Commercial Product - Not intended for Residential application.

① Capacity is certified in accordance with ANSI/ARI Standard 390-2003. ② EER = Energy Efficiency Ratio and is certified in accordance with ANSI/ARI Standard 390-2003.

### Ventilation System Packages

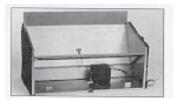

Bard Wall-Mounts are designed to provide optional ventilation packages to meet all of your ventilation and indoor air quality requirements. All units are equipped with a barometric fresh air damper as the standard ventilation package. All ventilation packages can be built-in at the factory or field-installed at a later date.

**Barometric Fresh Air Damper** 

**Motorized Fresh Air Damper** 

**Commercial Room Ventilator** 

**Economizer** 

**Energy Recovery Ventilator** 

### **BAROMETRIC FRESH AIR DAMPER - BFAD**

**STANDARD** 

The barometric fresh air damper is a standard feature on all models. It is installed on the inside of the service door and allows outside ventilation air, up to 25% of the total airflow rating of the unit, to be introduced through the air inlet openings and to be mixed with the conditioned air. The damper opens during blower operation and closes when the blower is off. Adjustable blade stops allow different amounts of outside air to be introduced into the building and can be easily locked closed if required.

#### **BLANK OFF PLATE - BOP**

**OPTIONAL** 

A blank off plate is installed on the inside of the service door. It covers the air inlet openings, which restricts any outside air from entering the unit. The blank off plate should be utilized in applications where outside air is not required to be mixed with the conditioned air.

#### **MOTORIZED FRESH AIR DAMPER - MFAD**

OPTIONAL

The motorized fresh air damper is internally mounted behind the service door and allows outside ventilation air, up to 25% of the total airflow rating of the unit, to be introduced through the air inlet openings and to be mixed with the conditioned air. The two position damper can be fully open or closed. The damper blade is powered open by a 24VAC motor with spring return on power loss. The damper can be controlled by indoor blower operation or can be field connected to be managed based on building occupancy.

**NOTE:** The above vent systems are intake only without built-in exhaust capability. Building will likely require separate field installed barometric relief or mechanical exhaust elsewhere within the conditioned space. Balancing dampers in the return air grille may be required to achieve specified amount of outdoor air intake.

#### **COMMERCIAL ROOM VENTILATOR - CRV**

OPTIONAL

The built-in commercial room ventilator is internally mounted behind the service door and allows outside ventilation air, up to 50% of the total airflow rating of the unit, to be introduced through the air inlet openings. It includes a built-in exhaust air damper.

The commercial room ventilator (CRV) is a simple and innovative approach to improving the indoor air quality by providing fresh air intake and exhaust capability through the CRV. The damper can be easily adjusted to control the amount of fresh air supplied into the building. The CRV can be controlled by indoor blower operation or field controlled based on room occupancy. Two versions available (except on 1.5 and 2-Ton models). The CRV and CRVS are power open - spring return on power loss, and CRVP is power open and power close. Complies with ANSI/ASHRAE Standard 62.1 "Ventilation for Acceptable Indoor Air Quality".

### **ECONOMIZER - EIFM**

OPTIONAL

The built-in economizer system is internally mounted behind the service door and allows outdoor air to be introduced through the air inlet openings. The amount of outdoor air varies in response to the system controls and settings defined by the end user. It includes a built-in exhaust air damper. The economizer is designed to provide "free cooling" when outside air conditions are cool and dry enough to satisfy cooling requirements without running the compressor. This in turn provides lower operating costs, while extending the life of the compressor.

### **Standard Features:**

- One Piece Construction Easy to install with no mechanical linkage adjustment required.
- Exhaust Air Damper Built in with positive closed position. Provides exhaust air capability to prevent pressurization of tight buildings.
- Actuator Motor 24 volt, power open, spring return with built in torque limiting switch.
- Proportioning Type Control for maximum "free cooling" economy and comfort.
- Moisture Eliminator & Prefilter permanent, washable aluminum construction.
- Enthalpy Control adjustable to monitor outdoor temperature and humidity.
- Minimum Position Potentiometer adjustable to control minimum damper blade position for ventilation purposes.
- Mixed Air Sensor to monitor outside and return air to automatically modulate damper position.

#### WALL-MOUNT ENERGY RECOVERY VENTILATOR - ERVF

**OPTIONAL** 

The wall-mount energy recovery ventilator (ERV) is a highly innovative approach to meeting indoor air quality ventilation requirements as established by ANSI/ASHRAE Standard 62.1. The ERV allows from 200 to 450 CFM (depending upon model) of fresh air and exhaust through the unit while maintaining superior indoor comfort and humidity levels. In most cases this can be accomplished without increasing equipment sizing or operating costs. Heat transfer efficiency is up to 67% during summer and 75% during winter conditions.

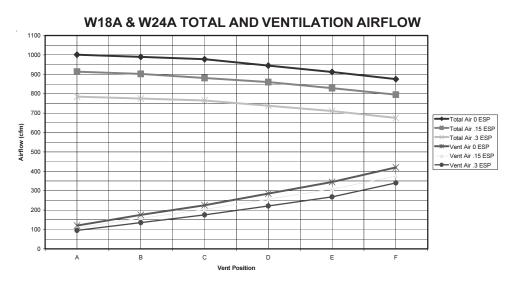

The ERV consists of a unique "rotary energy recovery cassette" that provides effective sensible and latent heat transfer capabilities during summer and winter conditions. Various control schemes are addressed including limiting ventilation during building occupancy only.

The ERV is designed to be internally mounted behind the service door in the W\*\*A, W\*\*H or W\*\*L model wall-mount units. It can be built-in at the factory or field installed as an option. ERVF-\*3 and ERVF-\*5 can be independently adjusted for intake and exhaust rates.

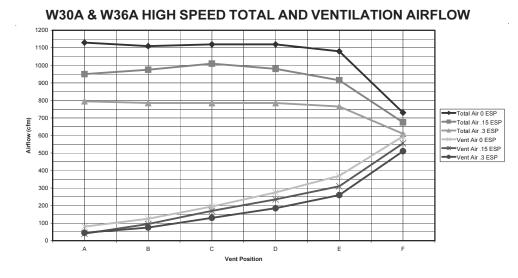

Manufactured under U.S. Patent Nos. 5,485,878; 5,301,744; 5,002,116; 4,924,934; 4,875,520; 4,825,936; 6,310,330.

IMPORTANT: While this electrical data is presented as a guide, it is important to electrically connect properly sized fuses & conductor wires in accordance with the National Electrical Code & all local codes.

Form No. \$3397-109 Supersedes \$3397-1008 Page 8 of 12

② Based on 75C copper wire. All wiring must conform to the National Electrical Code and all local codes.
③ These "Minimum Circuit Ampacity" values are to be used for sizing the field power conductors. Refer to the National Electrical code (latest version), Article 310 for power conductor sizing.

① These models are available with dehumidification with hot gas reheat.

Caution: When more than one field power circuit is run through one conduit, the conductors must be derated. Pay special attention to note 8 of Table 310 regarding Ampacity Adjustment Factors when more than three (3) current carrying conductors are in a raceway.

<sup>\*</sup> Top outlet supply option is available only factory installed and only on the selected models.

- ① For 0KW and circuit breakers (230/208 Volt) or toggle disconnects (460 Volt) applications, insert 0Z in the KW field of the model number.
- ② Insert "D" for dehumidification with hot gas reheat Models W42 60 only. See Form 7960-572 for complete details.

- $\ensuremath{\mathbb{O}}$  Low ambient control is required with economizer for low temperature compressor operation.
- ② For use only with "V" Control Module and TCS23 Controller.
- ③ Intake and exhaust can be independently adjusted.
- Model W24A1-C only.
- \* WMDK Door Kit must be ordered in addition to ERVF Assembly and color matched to unit ("X" = Beige; "4" = Buckeye Gray; "8" = Dark Bronze)

- STD = Standard equipment for these specified models.
- ① HPC. High pressure control is auto reset. Always used with compressor control module (CCM) which is included. See note ③.
- ② LPC. Low pressure control is auto reset. Always used with compressor control module (CCM) which is included. See note ③.
- ③ CCM. Compressor control module has adjustable 30-second to 5-minute delay-on-break timer. On initial power-up, or any time the power is interrupted, the delay-on-make will be 2-minutes plus 10% of the delay-on-break setting. There is no delay-on-make during routine operation of the unit. The module also provides the lockout feature (with 1 retry) for high and/or low-pressure controls, and a 2-minute timed bypass for low-pressure control.
- $\ensuremath{\mathfrak{P}}$  LAC. Low ambient control permits cooling operation down to  $0\ensuremath{^\circ} F$
- S ALR. The alarm relay has a set of normally open and normally closed dry contacts to provide the ability to signal a condition of shutdown on either high or low pressure controls.
- ® SK. PTCR start kit can be used with all -A single phase models. Increases starting torque 2-3x. Not used for -B or -C three phase models. Do not use if SK111 is used.
- © SK. Start capacitor and potential relay start kit can be used with all -A single phase models. Increases starting torque 9x. Not used for -B or -C three phase models. Do not use if CMC-15 is used.
- ® ODT. Outdoor thermostat is adjustable from 0 to 50°F. It is suitable for use as a compressor cut-off thermostat.
- ® DDC. Incorporates 4 additional sensors: discharge air temperature, indoor blower airflow, compressor current, and dirty filter. These sensing devices function to input analog data such as temperature, as well as digital data such as airflow, compressor status or filter status.
- ® "V" control module should be ordered in conjunction with direct digital controller (DDC) model TCS23. Refer to DDC specification sheet S3280 for more information.
- (1) Option not available for Model W18A.
- Use option N for Alarm Relay on Model W18A only

### Clearances Required for Service Access and Adequate Condenser Inlet Airflow

| MODELS                 | LEFT SIDE | RIGHT SIDE |
|------------------------|-----------|------------|
| W18A, W24A, W30A, W36A | 15"       | 20"        |
| W42A, W48A, W60A       | 20"       | 20"        |

NOTE: For side by side installation of two (2) WA models there must be 20" between units. This can be reduced to 15" by using a WL model (left side compressor and controls) for the left unit and WA (right side compressor and controls) for right unit. See WL Specifications S3400.

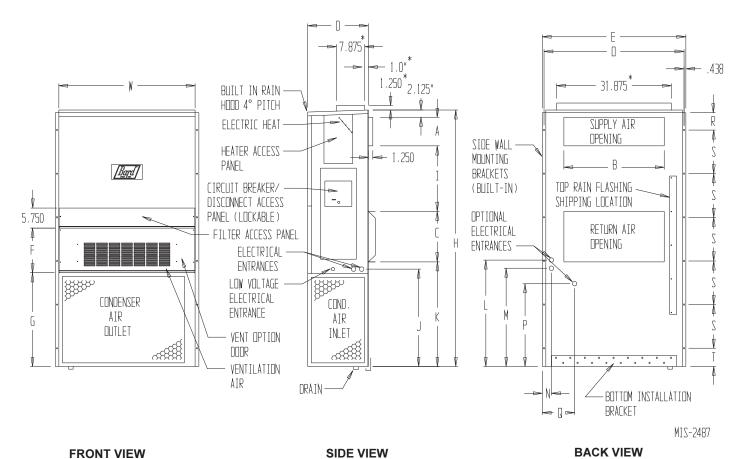

### Minimum Clearances Required to Combustible Materials

| MODELS ①         | SUPPLY AIR DUCT<br>FIRST THREE FEET | CABINET |

### WALL MOUNT GENERAL INFORMATION

### AIR CONDITIONER WALL MOUNT MODEL NOMENCLATURE

NOTE: Vent options X, B and M are without exhaust capability. May require separate field supplied barometric relief in building.

### SHIPPING DAMAGE

Upon receipt of equipment, the carton should be checked for external signs of shipping damage. If damage is found, the receiving party must contact the last carrier immediately, preferably in writing, requesting inspection by the carrier's agent.

### **GENERAL**

The equipment covered in this manual is to be installed by trained, experienced service and installation technicians.

The refrigerant system is completely assembled and charged. All internal wiring is complete.

The unit is designed for use with or without duct work. Flanges are provided for attaching the supply and return ducts.

These instructions explain the recommended method to install the air cooled self-contained unit and the electrical wiring connections to the unit.

These instructions and any instructions packaged with any separate equipment required to make up the entire air conditioning system should be carefully read before beginning the installation. Note particularly "Starting Procedure" and any tags and/or labels attached to the equipment.

While these instructions are intended as a general recommended guide, they do not supersede any national and/or local codes in any way. Authorities having jurisdiction should be consulted before the installation is made. See Page 3 for information on codes and standards.

Size of unit for a proposed installation should be based on heat loss calculation made according to methods of Air Conditioning Contractors of America (ACCA). The air duct should be installed in accordance with the Standards of the National Fire Protection Association for the Installation of Air Conditioning and Ventilating Systems of Other Than Residence Type, NFPA No. 90A, and Residence Type Warm Air Heating and Air Conditioning Systems, NFPA No. 90B. Where local regulations are at a variance with instructions, installer should adhere to local codes.

#### **DUCT WORK**

All duct work, supply and return, must be properly sized for the design airflow requirement of the equipment. Air Conditioning Contractors of America (ACCA) is an excellent guide to proper sizing. All duct work or portions thereof not in the conditioned space should be properly insulated in order to both conserve energy and prevent condensation or moisture damage.

Refer to Maximum ESP of operation Electric Heat Table 6.

Design the duct work according to methods given by the Air Conditioning Contractors of America (ACCA). When duct runs through unheated spaces, it should be insulated with a minimum of one inch of insulation. Use insulation with a vapor barrier on the outside of the insulation. Flexible joints should be used to connect the duct work to the equipment in order to keep the noise transmission to a minimum.

Models W18 & W24 as approved for zero inch clearance to the supply duct. For model series W30, W36, W42, W48, W60 and W70 a 1/4 inch clearance to combustible material for the first three feet of duct attached to the outlet air frame is required. See Wall Mounting Instructions and Figures 3 and 4 for further details.

Ducts through the walls must be insulated and all joints taped or sealed to prevent air or moisture entering the wall cavity.

Some installations may not require any return air duct. A metallic return air grille is required with installations not requiring a return air duct. The spacing between louvers on the grille shall not be larger than 5/8 inch.

Any grille that meets with 5/8 inch louver criteria may be used. It is recommended that Bard Return Air Grille Kit RG2 through RG5 or RFG2 through RFG5 be installed when no return duct is used. Contact distributor or factory for ordering information. If using a return air filter grille, filters must be of sufficient size to allow a maximum velocity of 400 fpm.

NOTE: If no return air duct is used, applicable installation codes may limit this cabinet to installation only in a single story structure.

#### **FILTERS**

A 1-inch throwaway filter is standard with each unit. The filter slides into position making it easy to service. This filter can be serviced from the outside by removing the filter access panel. A 1-inch washable filter and 2-inch pleated filter are also available as optional accessories. The internal filter brackets are adjustable to accommodate the 2-inch filter by bending two (2) tabs down on each side of the filter support bracket.

#### **FRESH AIR INTAKE**

All units are built with fresh air inlet slots punched in the service door.

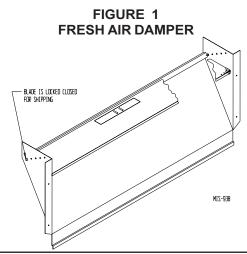

If the unit is equipped with a fresh air damper assembly, the assembly is shipped already attached to the unit. The damper blade is locked in the closed position. To allow the damper to operate, the maximum and minimum blade position stops must be installed. See Figure 1.

All capacity, efficiency and cost of operation information is based upon the fresh air blank-off plate in place and is recommended for maximum energy efficiency.

The blank-off plate is available upon request from the factory and is installed in place of the fresh air damper shipped with each unit.

#### **CONDENSATE DRAIN**

A plastic drain hose extends from the drain pan at the top of the unit down to the unit base. There are openings in the unit base for the drain hose to pass through. In the event the drain hose is connected to a drain system of some type, it must be an open or vented type system to assure proper drainage.

#### WALL MOUNTING INFORMATION

- 1. Two holes for the supply and return air openings must be cut through the wall as shown in Figure 3.
- 2. On wood frame walls, the wall construction must be strong and rigid enough to carry the weight of the unit without transmitting any unit vibration.
- Concrete block walls must be thoroughly inspected to insure that they are capable of carrying the weight of the installed unit.

#### **MOUNTING THE UNIT**

- These units are secured by wall mounting brackets which secure the unit to the outside wall surface at both sides. A bottom mounting bracket, attached to skid for shipping, is provided for ease of installation, but is not required.
- 2. The unit itself is suitable for 0 inch clearance, but the supply air duct flange and the first 3 feet of supply air duct require a minimum of 1/4 inch clearance to combustible material for model series W30, W36, W42, W48, W60 and W70. However, it is generally recommended that a 1-inch clearance is used for ease of installation and maintaining the required clearance to combustible material. See Figure 3 for details on opening sizes.
- 3. Locate and mark lag bolt locations and bottom mounting bracket location. See Figure 3.
- 4. Mount bottom mounting bracket.
- 5. Hook top rain flashing, attached to front right of supply flange for shipping, under back bend of top.

# **<b>MARNING**

Failure to provide the 1/4 inch clearance between the supply duct and a combustible surface for the first 3 feet of duct can result in fire causing damage, injury or death.

- 6. Position unit in opening and secure with 5/16 lag bolts; use 7/8 inch diameter flat washers on the lag bolts.
- 7. Secure rain flashing to wall and caulk across entire length of top. See Figure 3.
- 8. For additional mounting rigidity, the return air and supply air frames or collars can be drilled and screwed or welded to the structural wall itself (depending upon wall construction). Be sure to observe required clearance if combustible wall.
- 9. On side-by-side installations, maintain a minimum of 20 inches clearance on right side to allow access to control panel and heat strips, and to allow proper airflow to the outdoor coil. Additional clearance may be required to meet local or national codes.

# Clearances Required for Service Access and Adequate Condenser Airflow

| MODELS                       | LEFT SIDE | RIGHT SIDE |
|------------------------------|-----------|------------|
| W17A, W18A, W24A, W30A, W36A | 15"       | 20"        |
| W18L, W24L, W30L, W36L       | 20"       | 15"        |
| W42A, W48A, W60A, W70A       | 20"       | 20"        |
| W42L, W48L, W60L, W70L       | 20"       | 20"        |

NOTE: For side by side installation of two (2) W\*\*A models there must be 20" between units. This can be reduced to 15" by using a W\*\*L model (left side compressor and controls) for the left unit and WA (right side compressor and controls) for right unit.

See W\*\*A Specification S3397 & W\*\*L Specification S3400.

# **⚠ WARNING**

A *minimum* of 1/4 inch clearance must be maintained between the supply air duct and combustible materials. This is required for the first 3 feet of ducting.

It is important to insure that the 1/4 inch minimum spacing is maintained at all points.

Failure to do this could result in overheating the combustible material and may result in a fire causing damage, injury or death.

# FIGURE 7 COMMON WALL MOUNTING INSTALLATIONS

MIS-550 B

#### WIRING - MAIN POWER

Refer to the unit rating plate for wire sizing information and maximum fuse or "HACR" type circuit breaker size. Each outdoor unit is marked with a "Minimum Circuit Ampacity". This means that the field wiring used must be sized to carry that amount of current. Depending on the installed KW of electric heat, there may be two field power circuits required. If this is the case, the unit serial plate will so indicate. All models are suitable only for connection with copper wire. Each unit and/or wiring diagram will be marked "Use Copper Conductors Only". These instructions *must be* adhered to. Refer to the National Electrical Code (NEC) for complete current carrying capacity data on the various insulation grades of wiring material. All wiring must conform to NEC and all local codes.

The electrical data lists fuse and wire sizes (75° C copper) for all models including the most commonly used heater sizes. Also shown are the number of field power circuits required for the various models with heaters.

The unit rating plate lists a "Maximum Time Delay Relay Fuse" or "HACR" type circuit breaker that is to be used with the equipment. The correct size must be used for proper circuit protection and also to assure that there will be no nuisance tripping due to the momentary high starting current of the compressor motor.

The disconnect access door on this unit may be locked to prevent unauthorized access to the disconnect. To convert for the locking capability, bend the tab located in the bottom left-hand corner of the disconnect opening under the disconnect access panel straight out. This tab will now line up with the slot in the door. When shut, a padlock may be placed through the hole in the tab preventing entry.

See "Start Up" section for important information on three phase scroll compressor start ups.

See Tables 4 & 5 for Electrical Specifications.

#### WIRING - LOW VOLTAGE WIRING

230/208V, 1 phase and 3 phase equipment dual primary voltage transformers. All equipment leaves the factory wired on 240V tap. For 208V operation, reconnect from 240V to 208V tap. The acceptable operating voltage range for the 240 and 208V taps are:

| TAP | RANGE     |
|-----|-----------|
| 240 | 253 – 216 |
| 208 | 220 – 187 |

NOTE: The voltage should be measured at the field power connection point in the unit and while the unit is operating at full load (maximum amperage operating condition).

For wiring size and connections, refer to Wiring Manual 2100-507.

#### START UP

#### THESE UNITS REQUIRE R-410A REFRIGERANT AND POLYOL ESTER OIL.

#### **GENERAL:**

- 1. Use separate service equipment to avoid cross contamination of oil and refrigerants.
- Use recovery equipment rated for R-410A refrigerant.
- 3. Use manifold gauges rated for R-410A (800 psi/250 psi low).
- 4. R-410A is a binary blend of HFC-32 and HFC-125.
- 5. R-410A is nearly azeotropic similar to R-22 and R-12. Although nearly azeotropic, charge with liquid refrigerant.
- 6. R-410A operates at 40-70% higher pressure than R-22, and systems designed for R-22 cannot withstand this higher pressure.
- 7. R-410A has an ozone depletion potential of zero, but must be reclaimed due to its global warming potential.
- 8. R-410A compressors use polyolester oil.
- 9. Polyol Ester oil is hygroscopic; it will rapidly absorb moisture and strongly hold this moisture in the oil.
- 10. A liquid line dryer must be used even a deep vacuum will not separate moisture from the oil.
- 11. Limit atmospheric exposure to 15 minutes.
- 12. If compressor removal is necessary, always plug compressor immediately after removal. Purge with small amount of nitrogen when inserting plugs.

#### TOPPING OFF SYSTEM CHARGE

If a leak has occurred in the system, Bard Manufacturing recommends reclaiming, evacuating (see criteria above), and charging to the nameplate charge. If done correctly, topping off the system charge can be done without problems.

With R-410A, there are no significant changes in the refrigerant composition during multiple leaks and recharges. R-410A refrigerant is close to being an azeotropic blend (it behaves like a pure compound or single component refrigerant). The remaining refrigerant charge, in the system, may be used after leaks have occurred and then "top-off" the charge by utilizing the charging charts on the inner control panel cover as a guideline.

REMEMBER: When adding R-410A refrigerant, it must come out of the charging cylinder/tank as a liquid to avoid any fractionation, and to insure optimal system performance. Refer to instructions for the cylinder that is being utilized for proper method of liquid extraction.

Failure to conform to these practices could lead to damage, injury or death.

#### **SAFETY PRACTICES:**

- 1. Never mix R-410A with other refrigerants.
- 2. Use gloves and safety glasses, Polyol Ester oils can be irritating to the skin, and liquid refrigerant will freeze the skin.
- 3. Never use air and R-410A to leak check; the mixture may become flammable.
- 4. Do not inhale R-410A the vapor attacks the nervous system, creating dizziness, loss of coordination and slurred speech. Cardiac irregularities, unconsciousness and ultimate death can result from breathing this concentration.
- 5. Do not burn R-410A. This decomposition produces hazardous vapors. Evacuate the area if exposed.
- 6. Use only cylinders rated DOT4BA/4BW 400.
- 7. Never fill cylinders over 80% of total capacity.
- 8. Store cylinders in a cool area, out of direct sunlight.
- 9. Never heat cylinders above 125°F.
- 10. Never trap liquid R-410A in manifold sets, gauge lines or cylinders. R-410A expands significantly at warmer temperatures. Once a cylinder or line is full of liquid, any further rise in temperature will cause it to burst.

#### IMPORTANT INSTALLER NOTE

For improved start up performance wash the indoor coil with a dish washing detergent.

#### HIGH PRESSURE SWITCH

All W\*\*A/W\*\*L wall mounted air conditioner series models are supplied with a remote reset for the high and low pressure switch. If tripped, this pressure switch may be reset by turning the thermostat off then back on again.

# THREE PHASE SCROLL COMPRESSOR START UP INFORMATION

Scroll compressors, like several other types of compressors, will only compress in one rotational direction. Direction of rotation is not an issue with single phase compressors since they will always start and run in the proper direction.

However, three phase compressors will rotate in either direction depending upon phasing of the power. Since there is a 50-50 chance of connecting power in such a way as to cause rotation in the reverse direction, verification of proper rotation must be made. Verification of proper rotation direction is made by observing that suction pressure drops and discharge pressure rises when the compressor is energized. Reverse rotation also results in an elevated sound level over that with correct rotation, as well as substantially reduced current draw compared to tabulated values.

Verification of *proper rotation* must be made at the time the equipment is put into service. If improper rotation is corrected at this time, there will be no negative impact on the durability of the compressor. However, reverse operation for over one hour may have a negative impact on the bearing due to oil pump out.

NOTE: If compressor is allowed to run in reverse rotation for several minutes, the compressor's internal protector will trip.

All three phase compressors are wired identically internally. As a result, once the correct phasing is determined for a specific system or installation, connecting properly phased power leads to the same Fusite terminal should maintain proper rotation direction.

The direction of rotation of the compressor may be changed by reversing any two line connections to the unit.

#### **PHASE MONITOR**

All units with three phase scroll compressors are equipped with a 3 phase line monitor to prevent compressor damage due to phase reversal.

The phase monitor in this unit is equipped with two LEDs. If the Y signal is present at the phase monitor and phases are correct the green LED will light.

If phases are reversed, the red fault LED will be lit and compressor operation is inhibited.

If a fault condition occurs, reverse two of the supply leads to the unit. *Do not reverse any of the unit factory wires as damage may occur.* 

#### **CONDENSER FAN OPERATION**

Applies to W42, W48, W60 and W70 models only. The condenser fan motor on 230/208 volt, one and three phase, 60 HZ units is a two-speed motor that comes factory wired on high speed for peak performance. If ambient conditions permit, it can be reconnected to low speed (red wire) for lower sound level. See wiring diagram.

50 HZ models must have fan wired on low speed. These models are factory wired on low speed.

#### **SERVICE HINTS**

- 1. Caution owner/operator to maintain clean air filters at all times. Also, not to needlessly close off supply and return air registers. This reduces airflow through the system, which shortens equipment service life as well as increasing operating costs.
- 2. Check all power fuses or circuit breakers to be sure they are the correct rating.
- 3. Periodic cleaning of the outdoor coil to permit full and unrestricted airflow circulation is essential.

#### **SEQUENCE OF OPERATION**

COOLING — Circuit R-Y makes at thermostat pulling in compressor contactor, starting the compressor and outdoor motor. The G (indoor motor) circuit is automatically completed on any call for cooling operation or can be energized by manual fan switch on subbase for constant air circulation. On a call for heating, circuit R-W1 make at the thermostat pulling in heat contact for the strip heat and blower operation. On a call for second stage heat, R-W2 makes bringing on second heat contactor, if so equipped.

#### **COMPRESSOR CONTROL MODULE**

The compressor control module is standard on all models covered by this manual. The compressor control module is an anti-short cycle/lockout timer with high and low pressure switch monitoring and alarm relay output.

#### Adjustable Delay On Make And Break Timer

On initial power up or anytime power is interrupted to the unit, the *delay on make* period begins, which will be 2 minutes plus 10% of the *delay on break* setting. When the delay on make is complete and the high pressure switch and low pressure switch is closed, the compressor contactor is energized. Upon shutdown, the delay on break timer starts and prevents restart until the delay on break and delay on make periods have expired.

During routine operation of the unit with no power interruptions, the compressor will operate on demand with no delay.

#### **High Pressure Switch and Lockout Sequence**

If the high pressure switch opens, the compressor contactor will de-energize immediately. The lockout timer will go into a *soft lockout* and stay in soft lockout until the high pressure switch closes and the delay on break time has expired. If the high pressure switch opens again in this same operating cycle, the unit will go into *manual lockout* condition and the alarm relay circuit will energize. Recycling the wall thermostat resets the manual lockout.

# Low Pressure Switch, Bypass, and Lockout Sequence

If the low pressure switch opens for more than 120 seconds, the compressor contactor will de-energize and go into a soft lockout. Regardless the state of the low pressure switch, the contactor will reenergize after the delay on make time delay has expired. If the low pressure switch remains open, or opens again for longer than 120 seconds, the unit will go into manual lockout condition and the alarm relay circuit will energize. Recycling the wall thermostat resets the manual lockout.

#### **Alarm Relay Output**

Alarm terminal is output connection for applications where alarm relay is employed. This terminal is powered whenever the compressor is locked out due to HPC or LPC sequences as described.

NOTE: Both high and low pressure switch controls are inherently automatic reset devices. The high pressure switch and low pressure switch cut out and cut in settings are fixed by specific air conditioner unit model. The lockout features, both soft and manual, are a function of the Compressor Control Module.

#### **ADJUSTMENTS**

### Adjustable Delay on Make and Delay on Break Timer

The potentiometer is used to select Delay on Break time from 30 seconds to 5 minutes. Delay on Make (DOM) timing on power-up and after power interruptions is equal to 2 minutes plus 10% of Delay on Break (DOB) setting:

```
0.5 minute (30 seconds) DOB = 123 second DOM

1.0 minute (60 seconds) DOB = 126 second DOM

2.0 minute (120 seconds) DOB = 132 second DOM

3.0 minute (180 seconds) DOB = 138 second DOM

4.0 minute (240 seconds) DOB = 144 second DOM

5.0 minute (300 seconds) DOB = 150 second DOM
```

During routine operation of the unit with no power interruptions the compressor will operate on demand with no delay.

#### **Typical Settings for Dual Unit Installation:**

Unit 1: DOB set at 2 minutes, and DOM is 132 seconds Unit 2: DOB set at 4 minutes, and DOM is 144 seconds

#### PRESSURE SERVICE PORTS

High and low pressure service ports are installed on all units so that the system operating pressures can be observed. A pressure table can be found later in the manual covering all models. It is imperative to match the correct pressure table to the unit by model number. See Table 3.

#### TROUBLESHOOTING

#### **FAN BLADE SETTING DIMENSIONS**

Shown in Figure 8 is the correct fan blade setting for proper air delivery across the outdoor coil. Refer to Table 1 for unit specific dimension.

Any service work requiring removal or adjustment in the fan and/or motor area will require that the dimensions below be checked and blade adjusted in or out on the motor shaft accordingly.

### FIGURE 8 FAN BLADE SETTING

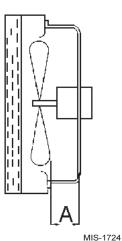

TABLE 1
FAN BLADE DIMENSION

WIIO-1724

| Model                                           | Dimension<br>A |
|-------------------------------------------------|----------------|
| W17A1<br>W18A1 / W18L1<br>W24A1 / W24L1         | 1.00"          |
| W30A1 / W30L1<br>W36A1 / W36L1                  | 1.25"          |
| W42A1 / W42L1<br>W48A1 / W48L1<br>W60A1 / W60L1 | 1.75"          |
| W70A1 / W70L1                                   | .75"           |

#### **REMOVAL OF FAN SHROUD**

- 1. Disconnect all power to the unit.
- 2. Remove the screws holding both grilles, one on each side of unit, and remove grilles.
- 3. Remove screws holding fan shroud to condenser and bottom. Nine (9) screws.
- 4. Unwire condenser fan motor.
- 5. Slide complete motor, fan blade, and shroud assembly out the left side of the unit.
- 6. Service motor/fan as needed.
- 7. Reverse steps to reinstall.

#### REFRIGERANT CHARGE

The correct system R-410A charge is shown on the unit rating plate. Optimum unit performance will occur with a refrigerant charge resulting in a suction line temperature (6" from compressor) as shown in Table 2A. If charge quantity is in doubt, reclaim unit and recharge to factory nameplate quantity.

# TABLE 2A REFRIGERANT CHARGE

| Model                  | Rated<br>Airflow | 95°F OD<br>Temperature | 82°F OD<br>Temperature |
|------------------------|------------------|------------------------|------------------------|
| W17A1<br>W18A1 / W18L1 | 600              | 61 - 65                | 62 - 66                |
| W24A1 / W24L1          | 800              | 56 - 60                | 56 - 60                |
| W30A1 / W30L1          | 1000             | 57 - 61                | 57 - 61                |
| W36A1 / W36L1          | 1100             | 56 - 60                | 57 - 61                |
| W42A1 / W42L1          | 1400             | 58 - 62                | 60 - 64                |
| W48A1 / W48L1          | 1550             | 63 - 67                | 65 - 69                |
| W60A1 / W60L1          | 1650             | 63 - 67                | 64 - 68                |

The suction line temperatures in Table 2 above are based upon 80°F dry bulb / 67°F wet bulb (50% R.H.) temperature and rated airflow across the evaporator during cooling cycle.

#### TABLE 2B REFRIGERANT CHARGE

| Model         | Rated<br>Airflow | 95°F<br>Subcooling | 82°F<br>Subcooling |
|---------------|------------------|--------------------|--------------------|
| W70A1 / W70L1 | 1800             | 15 - 18°           | 16 - 19°           |

The correct system R-410A charge is shown on the unit nameplate. Optimum unit performance will occur with a refrigerant charge resulting in a liquid subcooling as shown in Table 2B. If charge is in doubt, reclaim and recharge to factory nameplate charge.

Low side pressure ± 2 PSIG High side pressure ± 5 PSIG

Tables are based upon rated CFM (airflow) across the evaporator coil. If there is any doubt as to correct operating charge being in the system, the charge should be removed, system evacuated and recharged to serial plate charge weight.

NOTE: Pressure table based on high speed condenser fan operation. If condensing pressures appear elevated check condenser fan wiring. See "Condenser Fan Operation".

W70A1 - C00, C0Z C09 C15 ① Maximum size of the time delay fuse or HACR type circuit breaker for protection of field wiring conductors.

30 30 35

10 10 10

Caution: When more than one field power circuit is run through one conduit, the conductors must be derated. Pay special attention to note 8 of Table 310 regarding Ampacity Adjustment Factors when more than three (3) current carrying conductors are in a raceway.

23 23 27

IMPORTANT: While this electrical data is presented as a guide, it is important to electrically connect properly sized fuses and conductor wires in accordance with the National Electrical Code and all local codes.

Based on 75C copper wire. All wiring must conform to the National Electrical Code and all local codes.

<sup>3</sup> These "Minimum Circuit Ampacity" values are to be used for sizing the field power conductors. Refer to the National Electrical code (latest version), Article 310 for power conductor sizing.

<sup>\*</sup> Top outlet supply option is available only factory installed and only on the selected models.

# TEC40 Environmental Controller

The TEC40 is an electronic multi-stage controller for control of 3 or 4 air conditioners as 1 stage systems, or 2 air conditioners each operating as 2 stage systems. The latter is an excellent control method for dual air conditioners each with economizers, allowing maximum benefit of the economizer and switching to mechanical cooling based on building demand rather than a predetermined outdoor enthalpy condition.

### Engineered Features

#### **Unit Operation**

LED's indicate the primary unit running and which stage(s) of cooling or heating are energized. The controller is powered (24VAC, 50/60 Hz) from any of the air conditioners controlled. In the event of a power loss to one or more air conditioners the controller will continue to operate from any other air conditioner still being powered. If all power is interrupted to the building the controller has a power loss memory and will remember the unit sequence when power is restored. An On/Off for controller activation is provided.

#### **Thermostat**

The thermostat is an integrated 4-stage cool and 4-stage heat electronic control with a 2°F differential between each stage. Adjustable thermostat range is 55°F (13°C) to 90°F (32°C) and has a thermistor type sensor. The "dead band" between heating and cooling is adjustable between 4°F and 20°F.

#### Staging Delay Periods

The following delays are built in for both cooling and heating: stage 1 - 0 seconds; stage 2 - 10 seconds; stage 3 - 15 seconds; stage 4 - 20 seconds.

#### **Fire Suppression**

Dedicated terminals (F1 and F2) are provided for use with a field supplied fire suppression system, and will de-energize all air conditioners in the event of a fire.

#### Compact size

The TEC40 controller is 7 inches wide, 11.5 inches high, and 3 inches deep. Twelve (12) .875 inch diameter knockouts are provided for wiring connections.

#### **Isolation Circuitry**

The TEC40 circuitry totally isolates the 24VAC power supplies of all connected air conditioners from each other to prevent feedback or phasing problems.

#### **Sequence Timer**

The jumper selectable sequence timer can be set for 1, 3, 7, 14 or 24 days to rotate in sequence each connected air conditioner to the lead position and equalize run time. There is also a 0 day position available if necessary to halt rotation for test purposes or other reasons. There is a speedup feature located inside controller to accelerate the timer switch over periods (approximately 1 second per day).

#### **Manual Sequence Advance**

A recessed but externally accessible push-button advance button is provided for testing and service. This feature will force the lead unit to last place, and restart the selected sequence timer period.

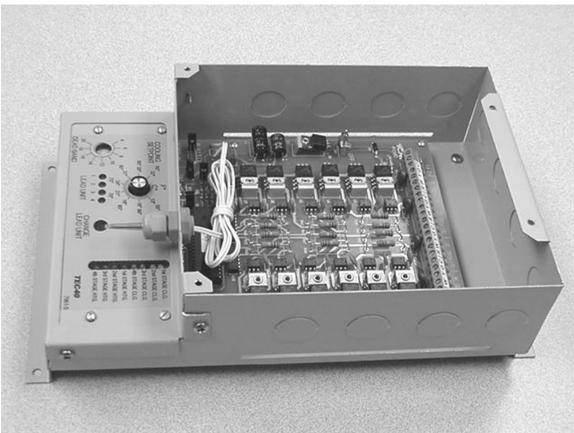

#### **Lead Unit Continuous Blower Option**

The blower on the air conditioner in the number 1 (lead unit) position can be forced to run continuously if desired by making a simple jumper selection.

#### 2 Unit / 2-Stage Operating Sequences

Both alternating and non-alternating sequence option can be selected to control 2 air conditioners with economizers.

#### \*\* IMPORTANT \*\*

The equipment covered in this manual is to be installed by trained, experienced service and installation technicians. Please read entire manual before proceeding.

#### SHIPPING DAMAGE

Upon receipt of equipment, the carton should be checked for external signs of shipping damage. If damage is found, the receiving party must contact the last carrier immediately, preferably in writing, requesting inspection by the carrier's agent.

#### **GENERAL**

These instructions explain the operation, installation and troubleshooting of the TEC40 controller.

All internal wiring is complete. Only attach low voltage field wiring to designated terminal strips.

The controller is for use with up to four (4) Bard air conditioning wall mount series units. The TEC40 is for use with units with or without economizers.

It is recommended that a five (5) minute compressor time delay relay be factory or field installed in each unit.

The TEC40 controller is suitable for both 50 and 60 HZ operation.

#### THEORY OF OPERATION

The controller is used to control up to four wall mount air conditioners from one thermostat. It provides total redundancy for the structure and equal wear on all units. It can be used with units with economizers, but all units must be equipped alike. That is, all must have economizers or all must be without economizers. See Figure 1 for component locations.

#### LEAD-LAG CHANGEOVER TIME

The lead-lag changeover time period is user selectable. Time periods available are 0, 1, 3, 7, 14 and 28 days. Once every time period the lead unit will be advanced to the next unit providing equal wear on the units. For timer speed up, push and hold the change lead unit pushbutton for one second. Timer speed up is supplied for ease of trouble shooting.

Lead unit cycles between all 4 units in four unit mode; between 1, 2 and 3 in three unit mode; and between units 1 and 2 in both two unit modes.

In the event of a unit(s) failure, the changeover time jumper may be set to 0 days. This will prevent the TEC40 from switching lead unit to the next unit. Push the push-button to make a functional unit the lead unit if necessary. If power is lost the controller will remember which unit was the lead unit when power is reapplied.

#### **MODES OF OPERATION**

The TEC40 has four modes of operation.

- 1. Four Unit Mode
- 2. Three Unit Mode
- 3. Two Unit Alternating Mode
- 4. Two Unit Non-Alternating Mode.

#### STAGING DELAY PERIODS

The following delays are built in for both cooling and heating: stage 1-0 seconds; stage 2-10 seconds; stage 3-15 seconds; and stage 4-20 seconds. The delays are active anytime there is a power interruption or the controller ON–OFF switch is exercised.

#### **FOUR UNIT MODE**

In four unit mode the TEC40 will control four air conditioners with or without economizers. Make connections per Figure 2 on Page 6.

#### Sequence of Operation - Cooling

First stage cooling set point is determined by the position of the cooling set point potentiometer. On a call for first stage cooling, the blower and either economizer or compressor of the lead unit is energized. The enthalpy control on the economizer will make the decision as to which is energized. If not equipped with economizers the compressor will energize. First stage cooling LED will light.

Second stage cooling set point is 2.0 degrees warmer than first stag cooling set point. On a call for second stage cooling, the blower and either economizer of compressor of the next unit is energized. The enthalpy control on the economizer will make the decision as to which is energized. If not equipped with economizer the compressor will energize. Second stage cooling LED will light.

Third stage cooling set point is 2.0 degrees warmer than second stage cooling set point. On a call for third stage cooling, the blower and either economizer is energized. The enthalpy control on the economizer will make the decision as to which is energized. If not equipped with economizer the compressor will energize. Third stage cooling LED will light.

Fourth stage cooling set point is 2.0 degrees warmer than third stage cooling set point. On a call for fourth stage cooling, the blower and either economizer or compressor of the next unit is energized. The enthalpy control on the economizer will make the decision as to which is energized. If not equipped with economizer the compressor will energize. Fourth stage cooling LED will light.

#### Sequence of Operation - Heating

First stage heating set point is determined by subtracting the dead band setting from cooling set point setting. For example, if the cooling set point is 74 degrees and the dead band adjustment is set at 4 degrees the heating set point is 70 degrees. On a call for first stage heating, the blower and electric heat of the lead unit is energized. First stage heating LED will light.

Second stage heating set point is 2.0 degrees colder than first stage heating set point. On a call for second stage heating, the blower and electric heat of the next unit is energized. Second stage heating LED will light.

Third stage heating set point is 2.0 degrees colder than second stage heating set point. On a call for third stage heating, the blower and electric heat of the next unit is energized. Third stage heating LED will light.

Fourth stage heating et point is 2.0 degrees colder than third stage heating set point. On a call for fourth stage heating, the blower and electric heat of the next unit is energized. Fourth stage heating LED will light.

#### **THREE UNIT MODE**

In three unit mode the TEC40 will control three air conditioners with or without economizers. Make connections per Figure 3 on Page 7.

#### **Sequence of Operation**

The cooling and heating sequence of operation are the same as four unit mode except that the fourth stage heating or cooling is not available.

#### TWO UNIT NON-ALTERNATING MODE

In two unit non-alternating mode the TEC40 will control two air conditioners with two speed or dual compressors. Make connections per Figure 5 on Page 9.

#### Sequence of Operation - Cooling

First stage cooling set point is determined by the position of the cooling set point potentiometer. On a call for first stage cooling, the blower and low speed or first compressor of the lead unit is energized. First stage cooling LED will light.

Second stage cooling set point is 2.0 degrees warmer than first stage cooling set point. On a call for second stage cooling, the high speed or second compressor of the lead unit will energize. Second stage cooling LED will light.

Third stage cooling set point is 2.0 degrees warmer than second stage cooling set point. On a call for third stage cooling the blower and low speed or first compressor of the lag unit will energize. Third stage cooling LED will light.

Fourth stage cooling set point is 2.0 degrees warmer than third stage cooling set point. On a call for fourth stage cooling, the high speed or second compressor of the lag unit will energize. Fourth stage cooling LED will light.

#### Sequence of Operation – Heating

First stage heating set point is determined by subtracting the dead bank setting from cooling set point setting. For example, if the cooling set point is 74 degrees and the dead band adjustment is set at 4 degrees the heating set point is 70 degrees. On a call for first stage heating, the blower and electric heat of the lead unit is energized. First stage heating LED will light.

Second stage heating set point is 2.0 degrees colder than first stage heating set point. On a call for second stage heating, the second electric heat (if equipped) of the lead unit is energized. Second stage heating LED will light.

Third stage heating set point is 2.0 degrees colder than second stage heating set point. On a call for third stage heating, the blower and electric heat of the lag unit is energized. Third stage heating LED will light.

Fourth stage heating set point is 2.0 degrees colder than third stage heating set point. On a call for fourth stage heating, the second electric heat (if equipped) of the lag unit is energized. Fourth stage heating LED will light

#### TWO UNIT ALTERNATING MODE

In two unit alternating mode the TEC40 will control two air conditioners with two speed or dual compressor or two air conditioners with economizers with full redundancy. For two air conditioners with economizers, make connections per Figure 4 on Page 8. For two air conditioners with two-speed or dual compressors, make connections per Figure 6 on Page 10.

# Sequence of Operation – Cooling with Economizers

First stage cooling set point is determined by the position of the cooling set point potentiometer. On a call for first stage cooling, the blower and either economizer or compressor of the lead unit is energized. The enthalpy control on the economizer will make the decision as to which is energized. First stage cooling LED will light.

Second stage cooling set point is 2.0 degrees warmer than first stage cooling set point. On a call for second stage cooling, the blower and either economizer or compressor of the lag unit is energized. The enthalpy control on the economizer will make the decision as to which is energized. Second stage cooling LED will light.

Third stage cooling set point is 2.0 degrees warmer than second stage cooling set point. On a call for third stage cooling, the compressor of the lead unit will energize and the economizer will return to minimum position if open. Third stage cooling LED will light.

Fourth stage cooling set point is 2.0 degrees warmer than third stage cooling set point. On a call for fourth stage cooling, the compressor of the lag unit will energized and the economizer will return to minimum position if open. Fourth stage cooling LED will light.

#### Sequence of Operation - Heating

First stage heating set point is determined by subtracting the dead and setting from cooling set point setting. For example, if the cooling set point is 74 degrees and the dead band adjustment is set at 4 degrees the heating set point is 70 degrees. On a call for first stage heating, the blower and electric heat of the lead unit is energized. First stage heating LED will light.

Second stage heating set point is 2.0 degrees colder than first stage heating set point. On a call for second stage heating, the electric heat of the lag unit is energized. Second stage heating LED will light.

Third stage heating set point is 2.0 degrees colder than second stage heating set point. On a call for third stage heating, the second electric heat (if equipped) of the lead unit is energized. Third stage heating LED will light.

Fourth stage heating set point is 2.0 degrees colder than third stage heating set point. On a call for fourth stage heating, the second electric heat (if equipped) of the lag unit is energized. Fourth stage heating LED will light.

#### INSTALLATION INSTRUCTIONS

#### **MOUNTING**

Included in the controller carton is the controller and installation instructions.

The controller should be installed on a vertical wall approximately four (4) feet above the floor away from drafts and outside doors or windows. Four (4) mounting holes are provided for mounting to the wall and holes for conduit connections are provided in both the base, side and top of the controller. The controller should not be mounted directly to a block wall; space away from wall with insulation or plywood.

Once mounted, slide the thermistor sensor down into the fitting on the bottom of the TEC40. Position the sensor so that 15/16 inch is protruding from the bottom of the fitting. Tighten the fitting to hold the sensor in position.

#### LOW VOLTAGE FIELD WIRING

The TEC40 is powered from the air conditioners that it is controlling, 24 VAC, 50/60 HZ, low voltage only.

Circuitry in the TEC40 isolate the power supplies of all connected air conditioners so that no back feeds or phasing problems can occur. Additionally if one or more air conditioners loose power the TEC40 and the other air conditioners are unaffected and will continue to operate normally.

Connect the low voltage field wiring from each unit per the low voltage field wiring diagrams in Figure 2, 3, 4 or 5 depending on the mode of operation desired.

#### FIRE SUPPRESSION CIRCUIT

To disable the TEC40 and shut down all air conditioners, terminal F1 and F2 may be used. The F1 and F2 terminals must be jumpered together for normal operation. A normally closed set of contacts may be connected across the terminals and the factory jumper removed for use with a field installed fire suppression system. The contacts must open if a fire is detected. Contacts should be rated for pilot duty operation at 2 amp 24 VAC minimum.

IMPORTANT NOTE: Bard models employ an electronic blower control that has a 60-second blower off-delay. In order to have immediate shutdown of the blower motor in addition to disabling the run function of the air conditions will require a simple wiring modification at the blower control located in the electrical control panel of the air conditioners being controlled by the lead/lag controller. To eliminate the 60- second blower off-delay disconnect and isolate the wire that is factory connected to the "R" terminal to the electronic blower control, and then connect a iumper from the "G" terminal on the blower control to the "R" terminal on the blower control. The electronic blower control will now function as an onoff relay with no off-delay, and the blower motor will stop running immediately when the F1-F2 fire suppression circuit is activated (opened).

#### **ADJUSTMENTS**

See Figure 1.

#### **COOLING SET POINT**

Set the cooling set point in degrees C° or F° as indicated on the front of the TEC40.

#### **DEAD BAND**

The dead band is the span between heating set point and cooling set point where no heating or cooling takes place. The cooling set point minus the dead band equals the heating set point. Adjustable from 4° to 20° F.

Turn the potentiometer fully counter clockwise for 4° dead band. Turn fully clockwise for 20° dead band. The arrow on top of the potentiometer does not indicate dead band setting.

#### **LEAD CHANGE PUSH-BUTTON**

Pushing the lead change push-button will immediately change the lead unit to the lag unit. It also resets the lead/lag changeover timer to zero and restarts the selected timing period.

#### ON/OFF SWITCH - UNDER COVER

This disables the TEC40. This switch must be ON for any heating or cooling to operate.

NOTE: Whenever the on/off switch is first turned ON, all 4 red LED's for lead unit indication will flash 4 or 5 times as the controller sequences itself, and then will revert to whichever unit was lead when on/off switch was turned OFF.

#### **CHANGING SELECTABLE FEATURES**

To change any selectable feature turn on/off switch OFF. Change jumpers as necessary and turn switch ON. Jumper changes do not take effect unless on/off switch is turned OFF, jumper plug moved, and on/off switch turned back ON.

### CHANGE OVER TIME JUMPER – UNDER COVER

The changeover period for the sequence can be adjusted to 0, 1, 3, 7, 14 or 28 days.

If the jumper is set to 7 days (or other selected choice), units will rotate upwards: first to second, second to third, third to fourth, and fourth to first place. If connected for three units then three will go to first, and fourth position is ignored.

The 0 day position is supplied in the event of a unit failure or if only one air conditioner is used with the TEC40. If the unit needs to run for a time and not switch to the lag unit, set the jumper to "0" and push the lead change push-button to make the functional or single unit the lead unit. When the jumper is in the 0 position the lead unit will never switch.

#### **TEST MODE JUMPER - UNDER COVER**

There is a test mode to accelerate the timing circuit from days to seconds. For example, if the timing selection jumper plug were set to the 7 day position, then utilizing the test mode feature the lead unit would advance in 7 seconds.

To use the test feature take the following steps:

- 1. Turn the on/off switch to OFF.
- 2. Place the jumper across the test mode pins.
- 3. Turn the on/off switch to ON.
- 4. The lead unit will now advance in upward sequence through the enabled unit positions.
- 5. To stop the accelerated sequence turn the on/off switch to OFF, remove the jumper, and then turn the on/off switch back ON.
- 6. After the 4 red LED's stop flashing the lead unit may be the one indicated at the time the on/off switch was turned OFF or it may be the next one up, depending on where the timer was in the accelerated sequence when switch was turned OFF.

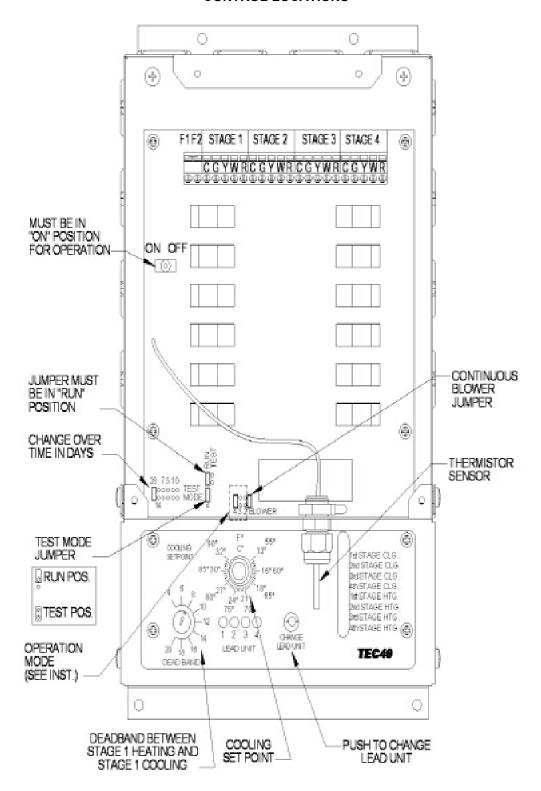

#### **OPERATION MODE JUMPER – UNDER COVER**

Position jumper across pins 4 for four unit mode. Position jumper across pins 3 for three unit mode. Position jumper across pins 2 for two unit non-alternating mode. Remove jumper for two unit alternating mode.

### CONTINUOUS BLOWER JUMPER – UNDER COVER

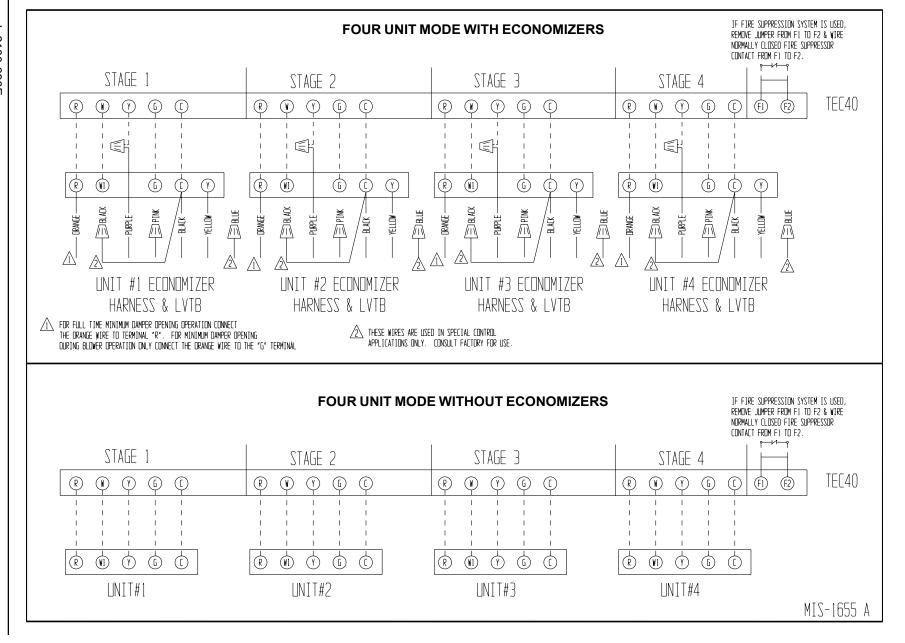

Position jumper across pins for continuous blower on the lead unit. Remove jumper to have the lead unit blower cycle with the compressor.

#### **FEATURES**

ET FANS, designed for heavy-duty ventilation applications. Fans with explosion proof motors designed to exhaust atmospheres containing flammable, explosive vapors or gases. Explosion proof motors are CSA approved for Class I, Group D and Class II, Groups E, F and G hazardous locations. Air deliveries based on AMCA test code for exhaust systems. Heavy-duty venturi panel, fixed position motor base with rigid tubular supports. Fan blades are non-sparking cast or fabricated aluminium. Back guard is heavy gauge steel wire.

**STANDARD SHUTTERS**. For normal applications. Mill finish aluminum vanes with steel pivot pins. 19ga. welded steel frame. Gray enamel finish. Vanes counter-balanced for easy operation, steel reinforced, felted for quiet, weather tight closure. Tie rod attached to vanes on fan side. 9/32" Ø mounting holes.

### INSTALLATION & MAINTENANCE INSTRUCTIONS

RECEIVING AND INSPECTION: Immediately inspect the fan and accessories noting any visible signs of damage on the delivery receipt. Report damage to the carrier within 15 days. Check to assure that impeller set screws are tight. Turn impeller by hand to see that it turns freely and does not bind. Whenever possible, fans should be stored indoors in clean, dry locations. If storage outdoors is necessary, fans should be protected against the elements and accumulation of dirt and moisture. Special care must be taken to keep motors and bearing assemblies dry and clean.

#### INSTALLATION

1. CAUTION! This unit has rotating parts and safety precautions should be exercised during installation, operation and maintenance.

2. WARNINGI DO NOT use in HAZARDOUS ENVIRONMENTS where fans electrical system could provide ignition to combustible or flammable materials, unless unit is specifically built for hazardous environments.

3. To install uncrated fan provide a square opening in the wall equal to the outside dimensions of the fan. It is preferable to frame in the opening with 2 X 4 material, or a metal frame in metal buildings.

4. Slide the fan into the framed opening in the wall. Securely fasten with bolts or screws provided by the installer.

5. When using an automatic shutter, be sure to position the shutter at least 6" from fan blades.

6. Guards must be installed when fan is within reach of personnel or within seven (7) feet of working level or when deemed advisable for safety.

 All wiring should be in accordance with local ordinances and the National Electric code.

8. Before starting, check all fasteners for tightness particularly in the propeller hub. Turn the propeller by hand to make sure it is in alignment with the orifice and fan blades do not strike.

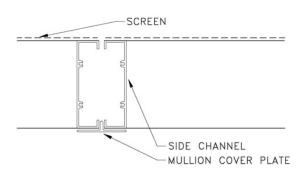

9. WARNING! Check voltage being supplied to the fan to see that it corresponds with the motor nameplate voltage; high or low voltage can seriously damage the motor. On multi-voltage motors check motor terminal connections to make sure motor is internally connected for voltage being supplied. Motor wiring diagram is located on the side of the motor. Extra care should be taken when wiring two speed motors since improper connections will damage motor and void motor warranty.

10. Operate under power and compare propeller rotation with directional arrow on fan. In the case of three phase motors, the direction can be changed by interchanging any two of the three motor leads. In the case of single phase motors, the reversing instructions will appear on the wiring diagram in the motor wiring compartment.

#### MAINTENANCE

1. REGULAR MAINTENANCE: Determined by the condition of the air passing through the fan, regularly scheduled inspection of all fan parts establishes a good maintenance routine. When the air is clean, maintenance can be as infrequent as once a year. When air is contaminated with grease vapors from cooking operations, maintenance may be required as often as once a week. Regular maintenance should include inspection and cleaning of all fan parts.

2. MOTORS: Motor bearings are prelubricated. Consult information printed on motor for lubrication instructions. If motor required replacement, a comparable one to the original with the same service factor and enclosure must be used.

### CONTROL DAMPERS

### HANDLING, INSTALLATION & MAINTENANCE

#### HANDLING:

Because of the nature of control dampers, careful handling is the first step required for successsful operation and performance. Dampers must be handled with care to prevent bending or twisting of frames, blades and linkage control parts.

#### INSTALLATION:

Dampers must be installed in all cases, squarely, without twisting or bending of frames, blades or linkages. The protrusion of screws, bolts, angles or other fastening devices must not interfere with damper operation. Dampers should be installed with blades in a horizontal position unless ordered otherwise. Dampers with blades required in a vertical position shall be c/w ball bearings or thrust washers.

#### STRUCTURAL SUPPORTS:

Structural supports are not supplied with any Westvent product but will be required to support any multi-section dampers. Structural supports to be supplied and installed by others.

#### COMMISSIONING:

The effects of improper installation and operation are the responsibility of the customer and the installer. If there are any problems with the dampers, please advise 'Westvent' before system startup for correction. Western Ventilation Products Ltd. cannot and will not accept responsibility for selection of product or damage that may be caused by faulty installation or operation of system.

#### **MAINTENANCE:**

The severity of operating conditions will normally indicate the frequency of service maintenance. Severe and abrupt changes in temperature, humidity and/or dust particles in the air stream will require a seasonal maintenance check. The recommended minimum frequency for maintenance checks is once every three months, an industry standard.

#### A: LINKAGE

Clean and lubricate with a light lubricating oil. Concealed channel linkage may require complete removal of damper.

#### B: BLADE TIP SEALS

Check for damage and replace if necessary. No need to remove damper to service.

### C: BLADE END (JAMB) SEALS

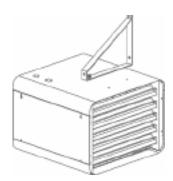

Clean and lubricate with a light lubricating oil. To replace the side seals, remove the bolts holding the pivot shaft pins to the blades, and install new seals if required.

IF YOU HAVE ANY FURTHER QUESTIONS PLEASE CONTACT "WESTVENT" AT PH (403) 250 3348 FX (403) 250 7786

## SERIES OAS

#### SUSPENDED UNIT HEATER

COMMERCIAL/INDUSTRIAL FORCED-AIR HEATER

#### Features

Colour Almond.

Finish Epoxy/polyester powder paint.

208, 240, 277\*, 347, 480\* or 600 Volts, 1 or 3-phase Voltage

Other voltages available upon request.

Some units may be field converted from 3 to 1-phase.

Construction 18 and 20-gauge steel.

Adjustable louvres to direct air flow.

High-limit temperature control with automatic reset.

Fan Motor mounted in cold compartment.

Thermally-protected motor.

Totally enclosed and factory-lubricated ball bearing motor (except for 15 to 25 kW at 208/240-volt). 58 dBA fan (2-10 kW), 67 dBA fan (15-30 kW) and 77

dBA fan (40-60 kW).

Fan over-ride purges heater of residual heat.

nt Durable tubular heating elements; stainless steel (2-10 kW); finned (15-60 kW). Concentric Heating element

disposition of heating elements.

All models have a factory-installed contactor. Control

240/208-Volt control circuit standard (with

transformer if necessary).

Also available with 24-Volt relay, with or without

transformer.

Optional built-in thermostat. 120-Volt control circuit available.

Installation Horizontal mounting from wall or from ceiling using 1 of

2 supplied brackets which allow 360° rotation\*\*

Vertical mounting using 4 threaded rods 1/2" X 13

UNC

(not included). Diffuser cones available.

Large and easily accessible control compartment. Maximum recommended height (horizontal): 2-10 kW: 2.4 m (8 ft); 15-30 kW: 3.0 m (10 ft); 40-60 kW: 4.5 m

(15 ft).

Protective screen allows lower mounting height

(except 40-60 kW).

Minimum height of 2.4 m (8 ft) for 40-60 kW heaters.

30°C (85°F) maximum operating temperature.

Warranty 1-year warranty against defects.

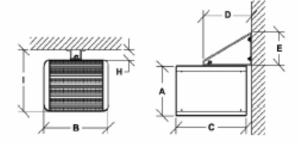

Applications Commercial hall, milk house, stair opening.

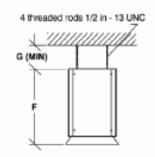

<sup>\* 277-</sup> and 480-Volt models available upon request.

<sup>\*\*</sup> Horizontal mounting only for 40, 50 and 60 kW secured by 4 hooks (ceiling only). Ouellet highly recommend using a wall thermostat for a greater comfort.

Approval Information

#### **APPLICATIONS**

- Parking lot lighting
- HVAC
- Display lighting
- Security lighting
- Lighted signage
- Storefront lighting

CALIFORNIA Title 24

ASHRAE 90.1

Model 2101 supplied with unit

#### **FEATURES**

#### **SCHEDULING:**

CIRCUIT 1: ON automatically at dusk, OFF at individual preset times each day, including skipping days when desired. Unit can be set to turn ON before dawn for early morning lighting.

**CIRCUIT 2:** ON at dusk, OFF at dawn automatically, daily.

CIRCUIT 3: Individual daily ON and OFF settings at desired times, including skipping any desired day or days Minimum ON is setting 1 hour with a minimum OFF setting of 2 hours. Minimum 8 hours between 2 OFF settings. 7 day calendar dial will accommodate up to 2 pairs of ON-OFF trippers per day — 7 pairs are supplied.

SKIP-A-DAY: Omit operations on any day.

MANUAL BY-PASS SWITCHES: Single pole, 20 Amps — one per circuit. Factory pre-wired to terminal strip. ON/OFF/AUTO positions for each circuit is independent — will not disturb automatic settings.

RESERVE POWER: Standard feature on all models keep dial on time up to 24 hours during power outage.

NOTE: All models are designed to control a contactor circuit and are not recommended for direct switching of most lighting loads.

ELECTROMECHANICAL CONTROLS

#### **SPECIFICATIONS**

INPUT VOLTAGE: 120 or 208-277VAC, 60 Hz,

varies by model.

TIMING ACCURACY: Line frequency.

TERMINAL RANGE: #8 - #14AWG.

OPERATING TEMPERATURE: -40° to 165°F (-40° to +74°C).

POWER CONSUMPTION: 5 watts maximum.

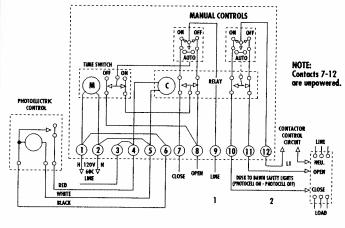

ENCLOSURE: Indoor NEMA 1 Metal with lockable hasp. Other enclosures include cover for access to by-pass switches with suffix "E" or Indoor/Outdoor NEMA 3 metal with suffix "O" (see page 153 for enclosure dimensions).

#### CONTACT RATINGS

ALL 3 CIRCUITS ARE INCLUDED IN T930L

#### SPECIFICATION WRITER'S GUIDE

T900 SERIES — Furnish and install, where shown, a TORK Photo/Time Control of the 7 Day Calendar dial type, which shall be suitable to operate mechanically-held contactor(s). Photo/Time Control shall be pre-wired to a central terminal block which provides connecting terminals for Photocontrol and independent contactor control circuit(s). Time switch shall function to prevent energization of lighting for preset periods each day. Time switch dial shall permit different ON/OFF settings for each day of the week, with provision for omitting selected days. Control shall include pre-wired manual switching for each contactor circuit specified. Enclosure shall be NEMA 1 surface. Photocontrol to be remotely installed in appropriate outside location. It shall be fully temperature compensated and shall provide for time delay of at least 15 seconds to prevent false switching. Photocontrol shall operate control center to energize whenever natural lighting falls below 1.5 - 5.5 foot candles turn on. Spring driven reserve timing motor shall be provided sufficient to operate time switch controls at least 24 hours after power failure. On restoration of power, time switch shall transfer to synchronous motor drive and automatically rewind reserve power unit. FOR DUSK-TO-DAWN LIGHTS: Control shall provide additional contactor circuit to above specifications except that it shall be responsive to Photocontrol only. Tork Model T-920L or equal. FOR PRESET ON/PRESET OFF: Control shall provide for additional contactor circuit to above specification except that it shall be responsive to time switch only. Tork Model T-930L.

# **Bulletin 600** Single Phase NEMA Manual Starting Switches

# Product Overview/Product Selection

Type 1 General Purpose Enclosure with Neon Pilot Light

#### Bulletin 600

 Starting and overload protection of small 1Ø AC/DC motors used on unit heaters stokers refrigeration compressors fans pumps

Bulletin 600 manual switches consist of a snap switch combined with a thermal overload device operating on the solder-ratchet principle. The switch is designed to prevent being held closed under a sustained motor overload. To reset the overload mechanism, the switch lever is moved to the OFF position. The motor can be restarted by pushing the switch lever to the ON position. Applications include compressors,

Hazardous Location: UL Listed (File No. E10314) CSA (LR11924)

### **Table of Contents**

Accessories ...... 1-180 Modifications ..... 1-180 Approximate Dimensions ......1-180 Standards Compliance and Certifications UL Listed — Enclosed Products (File No. E14841; Guide No. NLRV) UL — Open Style Products (File No. E14841; Guide No. NLRV2) CSA Certified LR1234 American Bureau of Shipping CE Marked (Per 60947)

Your order must include: 1) Cat. No. of the switch, 2) Cat. No. of the heater element(s), and 3) if required, Cat. No. of any accessories.

### COOPER LIGHTING - METALUX®

DESCRIPTION

The IA Series is an energy efficient family of light duty industrials that features premium performance and durability. The series incorporates sturdy embossed reflectors that precisely direct and effectively control light. The IA Series can be installed using various mounting methods and numerous options and accessories are available. The series is available with both Apertured (IA) and Closed Top (IC) reflector combinations. The IA Series can be utilized in

DIMENSIONS

4' or 8' Industrial 2 Lamps

INDUSTRIAL

- Equipped with energy Saving ballasts/complies with federal energy efficiency standards
- Die formed channels
- Heavy gauge apertured, (IA) or closed top, (IC) reflector
- Baked white enamel finish
- Pressure lock lampholders (RS), spring loaded lampholders (SL, HO)
- Wire guards available for special application
- SilverLining Reflector Finish available (3)
- Apertured reflector (IA) standard with 8% uplight
- Also available in tandem 8' lengths
- UL/CUL Listed. Suitable for damp locations.

#### INSTRUCTIONS

For installation of the suspended unit heater «OAS Series»

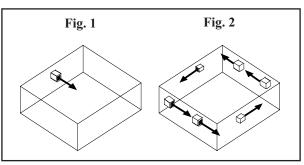

#### LOCATION OF HEATERS AND REMOTE **THERMOSTATS**

1- For best results, do not exceed mounting heights as per table below:

#### Maximum recommended mounting height:

| 2 - 10 kW  | 2.4 m (8 ft)  |
|------------|---------------|
| 15 - 30 kW | 3.0 m (10 ft) |
| 40 - 60 kW | 4.5 m (15 ft) |

- 2- Direct discharge air streams:
  - Away from room occupants.
  - Away from columns, posts, machinery and partitions.
  - Parallel to outside walls.
  - Along the windward side of buildings exposed to prevailing winds.
- 3- Locate thermostats on interior partitions, walls or posts (insulate from cold steel posts). Install thermostats away from cold drafts, internal heat sources and from heater discharge.
- 4- Small rooms require only one unit heater. In large rooms, arrange multiple units to provide perimeter circulation as illustrated in fig. 1 and 2.

#### POWER SUPPLY CONNECTIONS

The power supply may be single or three phase as shown on the nameplate. The wiring diagram is on the inside of the terminal compartment cover. Wire heater in accordance with local and national codes.

#### **TEST**

- To test the unit heater, temporarily set thermostat to maximum temperature.
- Make sure that the fan rotates in the correct direction; airflow should be in the direction of the arrow such as indicated on the fig. 4.

#### WARNING

- Disconnect all power supplies before working on circuit.
- Do not heat air containing combustible materials.
- Mount heater out of reach.
- Install at least 61 cm (2 ft) from floor except 40 - 60 kW at least 2.4 m (8 ft) from floor.

#### Minimum clearance from walls and ceiling are:

| 2 - 10 kW  | 10 cm (4 in.)  |
|------------|----------------|
| 15 - 30 kW | 15 cm (6 in.)  |
| 40 - 60 kW | 30 cm (12 in.) |

#### OVERTEMPERATURE PROTECTION

The motor and the electric heating elements are protected against overtemperature by automatic reset thermal high-limits.

Cycling of either high-limit is an indication of abnormal operation and should be corrected at once.

#### **LUBRIFICATION OF MOTOR**

The motor includes sealed lubrification-free bearings.

#### **MAINTENANCE**

Once a year, remove the dust accumulation inside the heater using a vacuum cleaner or compressed air. Cleaning should be done while the heater is disconnected from the supply circuit.

A qualified technician should perform any other servicing.

#### ATTENTION

Basic precautions should always be followed to reduce the risk of fire, electric shock, and injury to persons.

- Read all instructions before using this heater.
- Disconnect all power supplies before working on circuit.
- Do not heat air containing combustible materials.
- Mount heater out of reach.
- Install at least 61 cm (2 ft) from floor except 40 - 60 KW at least 2.4 m (8 ft) from floor.
- Do not use outdoors.
- Do not insert or allow foreign objects to enter any ventilation or exhaust opening as this may cause an electric shock or fire, or damage the heater.
- Do not block air intakes or exhaust in any manner.
- Heater contains arcing and sparking parts. Do not use it in areas where gasoline, paint, or flammable liquids are used or stored.
- Use this heater only as described in this manual. Any other use not recommended by the manufacturer may cause fire, electric shock, or injury to persons.

#### WARRANTY

OUELLET CANADA INC. warrants the electric heating element of the **OAS** series for a one (1) year period; and their component parts against defects in material and workmanship for a one (1) year period following the date of purchase, under normal use and service, when proof of purchase of such is provided to the manufacturer. The obligation of Ouellet Canada Inc., under the terms of this warranty, will be to supply a new unit and this omits the manufacturer to bear the installation costs or other secondary charges linked to replacing the unit or the component part(s).
