

This diagram illustrates the assembly of a water treatment system. It features a large cylindrical tank on the left, a rectangular frame structure in the center, and a vertical cylindrical component on the right. The system is composed of numerous pipes, valves, and filters, color-coded for identification: blue for the main piping, green for a specific branch, and red for smaller components. A green box highlights a specific assembly point on the left. Arrows at the bottom indicate the orientation of the components.
