

WORKS FOR ME

SOFTCASE CE12 LIGHTWEIGHT

- UNIQUE -
IMPELLER TECHNOLOGY

Ergonomic Handle with 30-foot Cord

Soft Textile Bag Housing with a Two-way Zipper

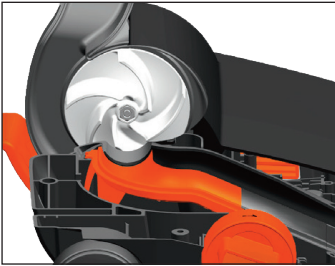

On/Off Foot Switch

MADE IN GERMANY

www.sebo.us

The new SOFTCASE CE12 Lightweight is entirely mechanical, instead of electronic. The electrical components are in the power head, with none in the bag housing or handle, thereby minimizing electrical connectors and further improving reliability. This also means that the on/off switch is located on the power head, so the user's foot can easily activate it. The filter bag housing of the SEBO SOFTCASE CE12 is made from a soft textile material with a two-way zipper. This durable material is shockproof, lightweight and won't scratch walls and furniture. The impeller sucks in the dirt picked up by the rotating brush and transports it through the air channel into the removable filter bag. A simple and effective system, which generates an astonishing volume flow of 7.13 gallons per second despite the relatively low rated power of 400 watts!

Efficient Impeller Technology – A 17,000 rpm impeller is driven by a toothed belt. A separate toothed belt drives the brush at approximately 3,000 rpm. This system makes the most efficient use of the motor power for powerful suction and brush action.

Quick Brush Roller Removal – SEBO brush rollers are uniquely designed to funnel hair and debris into the airflow channel. The brush roller can be quickly and easily removed without tools, for replacement, or to remove tangled hairs and fibers.

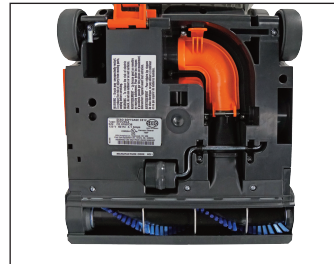

Designed for All Floor Surfaces – The power head features a four-level height adjustment, up or down, for optimal cleaning effectiveness. The brush raises off the floor when the handle is in the upright locked position.

Foot Pedal Stress Release – The quick-release foot pedal maximizes durability, by relieving excessive stress or force on the handle and bag housing when it's in the upright, locked position. Quality ABS plastic, and metal parts are standard.

Large Volume Filter Bag – The SEBO SOFTCASE CE12 has a sealable four-layer electrostatic filter bag with ultra-fine microfiltration and a volume of 1.4 gal. Changing bags is easy and clean, and a hygiene cap keeps dust sealed during removal and disposal.

Practical Cleaning Access and Sealing Strip – The cleaning flap on the bottom of the power head allows easy access into the air channel to remove blockages. A replaceable sealing strip prevents dust and debris kickback on hard floors.

Soft-start Feature, and Automatic Shut Off – The vacuum's gradual power-up capability extends motor life. In case of a blockage or overload, the unit automatically shuts off, avoiding damage to clothing items inadvertently left on the floor or hidden under beds.

Easy Cord Maintenance. On/Off Foot Switch – A 27-foot power cord can be quickly and easily replaced if damaged. The On/Off foot switch is located on the power head.

Low, 6-inch Profile – Lower the handle flat to the floor to clean under beds and furniture. Rubber-coated wheels protect all floor surfaces and provide smooth maneuverability. The bumper that surrounds the power head, protects furniture and walls from incurring scuffs, and scratches during use.

- Advanced Impeller Technology
- Reliable, Commercial-grade Components
- Durable Heavy-duty Belts are Standard
- Lifetime Belt Warranty
- Bagged vs. Bagless . . . Bags are Better!
- Save Money! SEBO Vacuums Last for Years!
- Excellent for Pet Hair Removal
- Made in Germany

- Volts – 120 • Watts – 400 • Amps – 4.1
- Air Volume – 7.13 gal/s | 27.1 l/s
- Four-layer Filter Bag – 1.4 gal | 5.5 l
- Working Width – 12.2 in | 31 cm
- Weight without Cord – 12 lb | 5.4 kg
- Weight with Cord – 13 lb | 5.9 kg
- Model Item #94251AM
